# MAYOR'S ADDRESS

QUINCY, MASS.

January 4, 1909

WILLIAM T. SHEA

# Mayor's Inaugural Address

---

Gentlemen of the City Council:—

The City of Quincy today begins the 21st year of its municipal life. During the past twenty years our city has made wonderful strides in commercial progress, its population has more than doubled and we have rapidly forged to the front among the hustling cities of the Commonwealth. I believe that during the next twenty years we will make greater progress than we have during the last score. Within the past few years the name of Quincy has become one of international note. The battleships built on our shores have visited nearly all the known world and it has fallen to the lot of this city to be the first place in the United States to build one of the new battleships of the so-called Dreadnought class, the progress of which has been watched with keen interest all over our own country and in foreign lands. Heretofore we have expended our energies chiefly in our granite quarries and in developing our lands. We have left for present development our splendid water front and I feel certain that a great share of the future success that is to come to Quincy will be found in that direction.

You, gentlemen, have gathered here to begin the work of the city for the coming year. You have been chosen by the people as their representatives and the trust of the people is confided in you. It is a time-honored custom for the Mayor at this time to review the work of the past year, to present the financial condition of the city to you so that you may realize the necessities of the city and its financial possibilities. At this time also it becomes the duty of the Mayor to suggest to your honorable body such recommendations as

he thinks may be of assistance to you in your important task of rendering to our city the best service that it is possible to give. With this end in view I have prepared a few suggestions for your consideration.

## SCHOOLS

In my inaugural address of a year ago I suggested that the City Council and School Board should devise some method of co-operation so that the work of the School Department, one of the most important in the city, could go on without restraint. I am happy to state that the relations between the Council and School Board the past year have been most harmonious and I trust that a continuation of this state of affairs may prevail the coming year. The most important work undertaken the past year in connection with the School Department was the erection of the new Coddington School which was accepted by the city on Saturday and was opened for the use of teachers and pupils this morning. The wait for this new building has been a long one since the project was first considered but the city has, in some degree, been compensated by the very handsome and well constructed building that today becomes part of our public school equipment. It has been pleasing to me, and must be, I think, to all our citizens, to know that the building was constructed and equipped in all its details, but one, by citizens of Quincy. The school has been pronounced a splendid building by all who have inspected it and I hope it will long stand as a monument to Quincy industries. Unfortunately for the children who attend this school, the granite strike of the early spring delayed work on the building. But for this the building would have been completed earlier.

During the past year the Council has appropriated \$12,000 for a four-room addition to the Lincoln School and bids will be asked for in a few days. With the erection of this addition it is thought the accommodations for the Adams, Lincoln and John Hancock districts will be sufficient for some time. The erection of new buildings with-

in the past few years has left four old wooden buildings standing idle and useless. These are the old High School, the two Coddington buildings and the old Quincy School building. Some of these structures have become targets for petty vandalism and I think it would be advisable for the Council to instruct the Mayor to dispose of at least three of these buildings. One of the two old buildings on the Coddington lot is in good condition and being located in the center it has been thought advisable to keep it intact in case it may be needed for further public use.

## HIGHWAYS AND BRIDGES

This is an important department of our public works and one that calls for careful thought and conservative management. The work required of this department is entirely out of proportion to the amount of money appropriated for its use. We must, therefore, do the best we can with the money at our disposal, making all work on the streets as far as possible of a permanent nature.

Some idea of the importance of this department can be inferred from the following brief statement of a portion of the work accomplished by it during the past year, viz:—

Permanent streets built.....	3 miles
Catch basins built.....	114
Surface drainage pipe laid.....	9,274 feet
New curbstone set.....	400 feet
Crosswalks laid.....	9
Paved gutters laid.....	1,000 feet

A total of more than 10,000 tons of crushed stone has been taken from the city ledge and placed upon our streets at an average cost of 70 cents a ton, loaded on the wagons. From the fact that about one-third of the amount of money appropriated for miscellaneous highways is required in cleaning streets, sidewalks and catch basins, you can readily see that the amount left for repairing the streets is necessarily small. .

The macadamized portion of Hancock street between City Square and Neponset bridge is in such a poor condition that it should be rebuilt this year. The cost of macadamizing is about 95 cents a yard and the average life of such a street is from two to three years. Granite paving can be laid complete for \$1.65 a yard. I believe it is economy for the city to pave this street in view of the heavy travel thereon. It would cost about \$46,000 to pave and curb this portion of Hancock street and the cost of macadamizing and curbing would be about \$23,000. I think it wise to pave a portion of this street each year until the street is completely paved and I earnestly recommend that an appropriation be made for this purpose.

Howard street is another thoroughfare which in my opinion should receive our attention. The largest business enterprise in the city is located on this street. Local pride should prompt us to provide a suitable approach to this industry. The street at present is narrow, hilly and in a generally poor condition. This street needs straightening and widening, particularly that portion of it between Des Moines road and Quincy avenue. I earnestly recommend this matter to your most serious consideration.

The problem of laying the dust on our main streets is becoming a serious one, owing chiefly to the increase in the automobile travel. I am of the opinion that some method of oiling these streets should be adopted this year. I am having an investigation made for the purpose of determining the best method of doing this work, the results of which I will later lay before you.

The Fore River bridge during the past year has been replanked but it needs repainting and notwithstanding the fact that it is practically a new bridge considerable repairs will have to be made on it this year.

## SIDEWALKS

Good sidewalks are an essential factor of a city. It has been said that they are to a great extent an index of the character of a city. There is considerable opportunity for

improvement in our sidewalks. I renew my recommendations of last year and earnestly urge that a substantial appropriation be made for the purpose of building permanent sidewalks under the betterment act.

## PARKS AND PUBLIC PLAYGROUNDS

I am a firm believer in parks and public playgrounds and think that as fast as practicable suitable playgrounds for the children should be provided in each ward of the city. I also believe that so far as practicable the public playgrounds should be flooded in the winter time for skating and provision should be made for that purpose.

At the last municipal election the city accepted the provisions of Chapter 513 of the Acts of 1908 relative to providing and maintaining playgrounds of suitable size and equipment for the children of the city. Provision should be made in the near future for carrying this act into effect. During the past year the Park Commissioners have obtained good results with the money at their disposal.

## WATER DEPARTMENT.

This department is fast becoming one of the largest and most important in our city. The demands for extensions are constant and increasing, particularly in Squantum, Houghs Neck and Rock Island. The people in these sections of the city are entitled to have their demands for water met with reasonable promptness. At the present time the City has no water pipes in Squantum or Rock Island and I recommend the extension of the water pipes to these districts. The pipes in several of our streets should be replaced by larger ones, as they are now inadequate for the purposes required of them. During the past year this department has laid ap-

proximately 17,000 feet of water pipe, set 20 hydrants, and 31 water gates. 312 service connections were made during the year. The total number of miles of water pipe laid in the city is 106. The total number of services in use 6,403.

The total number of meters installed to date is 1,913.

## SEWERS

The work of construction was begun by this department in April last and carried on throughout the season with very good success. Two gangs of men have been employed. A little more than three and one-half miles of various sized pipes ranging from 8 to 15 inches in diameter were laid during 1908.

During the year 1908, 301 connections were made with the public sewers. The money for particular sewers is exhausted and an early appropriation should be made for this purpose, as there are several applications on hand that will have to be attended to in the spring.

In the majority of instances the streets through which the sewers were laid last year were selected at the suggestion and on the recommendation of the Board of Health.

A study is now being made for laying sewers at Houghs Neck. There are several petitions now on hand for the extension of the sewerage system, an estimate of which will be made later.

## POOR DEPARTMENT

The worthy poor should always receive our earnest attention. During the past year the people who through sickness or misfortune have been obliged to apply to the City for aid have been relieved and made comfortable so far as the funds at the disposal of the Overseer would permit.

Your attention will later be called to some permanent improvements which should be made in the buildings of this department.

## BOARD OF HEALTH

This is an important department of the city government and upon the proper discharge of its duties to a considerable extent depends the health of the community. The facilities of the Board for the proper collection of garbage are now inadequate and further means should be provided.

Recent legislation has made it obligatory upon each city of this Commonwealth to provide a hospital for the reception of persons having small-pox or other diseases dangerous to the public health.

I am advised that the City Hospital is willing to co-operate with the City in the erection and maintenance of a ward on its premises in connection with its hospital for the use of such patients. Authority must first be obtained from the Legislature before the City can avail itself of this offer. I recommend that the Mayor be authorized to petition the Legislature that authority be granted the City to make such an arrangement with the hospital authorities and to appropriate money for that purpose. The necessity of a strict compliance with all the laws intended for the preservation of the public health is earnestly urged upon all our citizens.

## POLICE DEPARTMENT.

The work of this department is constantly increasing. I believe the number of regular patrolmen should be increased. A day officer should be placed in Ward 5, and one or more night officers should be added to the force.

In this connection I desire to call your attention to the fact that an order amending the ordinance regulating this department is now pending before your Board. I believe the adoption of this amendment would tend to improve the discipline and efficiency of the force and earnestly urge its prompt consideration.

## FIRE DEPARTMENT.

This department has rendered excellent service during the past year. Fires in the city have been ably and carefully handled and have been attended with but small losses.

Three new fire alarm boxes have been added, which greatly improved the service.

The fire alarm battery at the Central Station has been remodeled and put in first-class condition. Some improvements will have to be made in the equipment of this department the coming year. Three of the horses are in poor condition and should be replaced.

The present fire engine has been in use about twenty-seven years and needs to be repaired and remodeled. It will cost about \$2200 to do this work.

An order for the purchase of a new fire engine is now pending before your Board. I urge that this matter receive your early attention.

## WATER. FRONT

I believe the time has come when we should take an active interest in the development of the water front of our city. We should co-operate with our neighboring city of Brockton in its canal project, as a United States Government proposition for a free canal from Quincy to Brockton, Taunton, Fall River and Newport. The opening up of such a way would mean much to our city. I believe it would be wise to establish the office of Dock and Water Front Commissioner, with no salary attached thereto. Such a Commissioner would give attention to the matter of establishing public landing places on our shores and keep in touch generally with matters pertaining to the commercial development of our water front.

## NO LICENSE

Our city has again by an overwhelming majority voted in favor of No License.

The will of the people on this question having been so clearly expressed must be respected, and the laws concerning the sale of intoxicating liquors fully and impartially enforced.

During the past year the police have been active in enforcing these laws.

I shall insist upon continued vigilance on the part of the police force, not only in the enforcement of the liquor laws but of all the laws for the suppression of crime and the protection of life and property.

## GRADE CROSSINGS

The special commission consisting of Hon. John L. Bates, Hon. Arthur H. Wellman, Hon. Winfield S. Slocum, appointed to determine the method of abolishing the grade crossings at Saville and Water streets, have held several public hearings during the year, and it is expected that a final hearing will be held on the 16th inst.

The City before deciding on the method of abolishing these grade crossings, which it would advocate, invited the cooperation of the Granite Manufacturers' Asso., Citizens' Association, Board of Trade, and the Central Labor Union. Representatives of these organizations have acted with the Mayor and City Solicitor in looking after the City's interest in this important matter. The plans adopted by the City were, before being submitted to the Commission, approved by these organizations and also by the citizens at a mass meeting held at City hall. The City plans provide for a slight depression of the tracks of the Railroad Company at Water street, a considerable depression of said tracks at the Saville street crossing, and in each instance an overhead bridge with easy grades along the lines of the present locations of said streets.

## CITY CHARTER

Discussion still continues as to the advisability of amending the City Charter.

The form of government provided by our City Charter is as a whole generally satisfactory. I believe, however, that in some respects the charter could be amended to an advantage.

The term of office for the Mayor should be extended to two, and possibly three years.

The Mayor should *ex officio* be a member of the School Committee.

The number of Councilmen should be substantially reduced, and authority to deal with much of the matters that now engage the attention of the City Council should be transferred to the Executive Department.

Party designations should be eliminated at our municipal elections.

## WIRES AND SHADE TREES

I think that the time has come for the City Council to establish a department of wires with men in charge who shall give their sole time to keeping in condition all fire alarm and police wires of the city and also pass upon the wiring for electric lighting purposes that may be installed in our public buildings as well as to take care of all the wires at present installed in City Hall, the school buildings, fire houses, police station and any other municipal building. At present there is an official connected with the Fire Department branch of the public service who is known as the Superintendent of Fire Alarm. That office was created when the official in question had to take care only of the Fire Department's wires. A few years ago a police signal system was installed and since then the same official has had charge of the police wires, although he is in no way responsible to

the Police Department. At present there are 110 miles of Fire Department wires and 38 miles of Police Department wires to be looked after besides the battery rooms in the Central Fire Station and police headquarters, three steam fire alarm whistles and five fire alarm bells of a large size. Considering the fact that the fire alarm men have practically to take care of all public wires in the city, working for two departments and responsible only to one, it seems to me that the most business-like way to do is to create the office of Inspector of Wires.

The occupant of such office should have the full responsibility of taking care of all public wires in the city and should have the power to pass upon the locations of our Fire and Police Department wires on the poles of public service corporations which now reserve a portion of their poles for the City's use. Such an official could also have the authority to order the trimming of trees where necessary and also to prohibit the mutilation of our shade trees by the employees of corporations which have their poles and wires in our streets. In past years there has been considerable of this done in our city. If there is one thing we ought to be careful of in our public streets it is the shade trees with which our city has been blest in large numbers and for the protection of which we are annually spending thousands of dollars in the suppression of pests. I earnestly recommend that the Council give this suggested department its most careful consideration, as it is in keeping with the policy pursued by other cities of this State, many not so large as ours, where the best of results have been accomplished,

## FINANCIAL CONDITION OF THE CITY

The following is a detailed statement of the financial condition of the city as of January 1, 1909.

## STATEMENT OF DEBT

Municipal Debt, Jan. 1, 1908, .....	\$504,540.00
Paid during the year, .....	105,670.00
	<hr/>
	\$398,870.00
Added during the year, .....	136,290.00
	<hr/>
Debt Jan. 1, 1909, .....	\$535,160.00

## STREET IMPROVEMENT LOAN

Debt Jan. 1, 1908, .....	\$56,900.00
Paid during the year, .....	3,300.00
	<hr/>
Debt Jan. 1, 1909, .....	\$53,600.00

## WATER DEBT

Debt Jan. 1, 1908, .....	\$675,000.00
Paid during the year, .....	40,500.00
	<hr/>
	\$634,500.00
Added during the year, .....	27,000.00
	<hr/>
Debt Jan. 1, 1909, .....	\$661,500.00

## SEWER DEBT

Debt Jan. 1, 1908, .....	\$548,100.00
Paid during the year, .....	19,300.00
	<hr/>
	\$528,800.00
Added during the year, .....	30,000.00
	<hr/>
Debt Jan. 1, 1909, .....	\$558,800.00

## PARK DEBT

Debt Jan. 1, 1908, .....	\$32,000.00
Paid during the year, .....	2,000.00
	<hr/>
Debt Jan. 1, 1909, .....	\$30,000.00

## RESUME

Total Debt Jan., 1, 1908, .....	\$1,816,540.00
Paid during the year, .....	170,770.00
	<hr/>
	\$1,645,770.00
Added during the year, .....	193,290.00
	<hr/>
Total Debt Jan. 1, 1909, .....	\$1,839,060.00

## MATURING DEBT

	Year 1909	Year 1908
Municipal,	\$108,985.00	\$105,670.00
Street Improvements,	3,300.00	3,300.00
Water,	42,500.00	40,500.00
Sewer,	20,300.00	19,300.00
Parks,	2,000.00	2,000.00
	<hr/>	<hr/>
	\$177,085.00	\$170,770.00

## MUNICIPAL DEBT

January 1, 1909, is divided as follows:—

Schools, .....	\$327,199.25
Streets, .....	101,673.81
Bridges, .....	49,775.94
Public Buildings, .....	13,735.00
Fire Apparatus, .....	6,226.00
Other Debts, .....	36,550.00
	<hr/>
Total	\$535,160.00

## HOW DEBT MATURES

The Municipal Debt falling due in two years is compared below:—

	1909	1908
January, .....	\$10,250.00	\$2,250.00
February, .....	10,000.00	5,000.00
March, .....	7,000.00	7,000.00
April, .....	4,425.00	6,100.00
May, .....	2,500.00	2,300.00
June, .....	1,500.00	1,500.00
July, .....	20,710.00	17,150.00
August, .....	9,820.00	13,120.00
September, .....	9,500.00	9,500.00
October, .....	8,600.00	5,500.00
November, .....	5,450.00	3,700.00
December, .....	19,230.00	32,550.00
Total	\$108,985.00	\$105,670.00

## HOW APPORTIONED

The Municipal Debt coming due in 1909 is divided as follows:—

School, .....	\$48,649.75
Streets, .....	24,516.59
Sewer Connections, .....	10,000.00
Fire Apparatus, .....	1,438.00
Public Buildings, .....	5,685.00
Bridges, .....	5,530.66
Miscellaneous, .....	13,165.00
Total	\$108,985.00

## CITY VALUATION

The valuation of the three preceding years is as follows:—

1906 Net Valuation, .....	\$26,168,210.00
1907 Net Valuation, .....	26,920,046.00
1908 Net Valuation, .....	28,282,759.00

## A COMPARISON

Summary of total debt Jan. 1, 1909, as compared with total debt Jan. 1, 1908.

	1909	1908	
Municipal,	\$535,160.00	\$504,540.00	Inc. \$30,620.00
Street Imp't.,	53,600.00	56,900.00	Dec. 3,300.00
Water,	661,500.00	675,000.00	Dec. 13,500.00
Sewer,	558,800.00	548,100.00	Inc. 10,700.00
Parks,	30,000.00	32,000.00	Dec. 2,000.00
Total	\$1,839,060.00	\$1,816,540.00	
Increase in Total Debt for the year, .....			\$22,520.00
Increase in Municipal Debt for the year. ....			30,620.00

## LOANS ISSUED IN 1908

Municipal, .....	\$136,690.00
Water, .....	27,000.00
Sewer, .....	30,000.00
Total	\$193,290.00

## APPROPRIATIONS 1908

Lincoln School, .....	\$12,000.00
Sewer House Connections, .....	6,000.00
Coddington School, .....	4,000.00
Repairs School Buildings, .....	1,260.00
Atlantic School Grading, .....	800.00
Gypsy Moth, .....	3,300.00
Fire Nets, .....	200.00
Grade Crossing, .....	1,000.00
Grove Street, .....	2,000.00
Sea Street, .....	800.00
Coddington School Furnishings, .....	5,200.00
Broadway, .....	500.00
Smith Street, .....	1,700.00
Webster Street, .....	1,400.00

Surface Drainage, .....	5,166.00
Baxter Street, .....	1,834.00
Board of Health, .....	1,500.00
Hose House, Ward 6, .....	800.00
Hose House, Ward 4, .....	250.00
Alarm Box, .....	100.00
Poor Department, .....	2,500.00
Nightingale Avenue, .....	1,230.00
Total, .....	<u>\$53,540.00</u>

### LOANS UNDER SPECIAL ACTS

Water Department, .....	\$27,000.00
Sewer Department, .....	30,000.00
Total	<u>\$57,000.00</u>

### LIMIT OF INDEBTEDNESS

Our limit for general municipal indebtedness is two and one-half per cent. on the average net valuation of the city for the last three years.

Average net valuation for said years:	\$27,123,671.00
Limit of borrowing capacity of the city in 1909,	678,092.00
Municipal debt limit, Jan. 1, 1909,	535,160.00
Net borrowing capacity, Jan. 1, 1909,	142,932.00

### LIMIT OF TAX LEVY

The law allows us to assess \$12 per \$1000 on the net valuation for the preceding year for the current expenses of the city for the present year.

Net valuation of the city in 1908,	\$28,282,759.00
Twelve dollars on a thousand, (Amount available for current expenses,)	339,393.00

The total city municipal debt outside of the debts authorized by special acts amounts to \$535,160, and of that amount \$108,935 falls due this year.

## VALUATION CITY PROPERTY

The funded debt of the city is \$1,839,060.

Believing it would be of interest to the citizens to know how their money has been invested, I have caused an inventory to be made of the property belonging to the several municipal departments, and have had said property appraised at its present value.

A statement of the same is as follows:—

Water System, .....	\$1,193,390.00
Sewer System, .....	729,150.00
School Buildings, .....	783,925.00
Fire Station, .....	62,575.00
Public Buildings, .....	97,300.00
Highway Department, .....	11,087.00
Engineering Department, .....	16,117.00
Poor Department, .....	2,483.00
Assessors' Department, .....	567.00
Treasurer's Department, .....	250.00
Tax Collector's Department, .....	934.00
Sealers of Weights and Measures Department, .....	450.00
Police Department, .....	9,255.00
Fire Department, .....	48,175.00
Board of Health Department, .....	8,354.00
Library Books, .....	10,000.00
Water Office, .....	725.00
City Clerk's Department, .....	1,580.00
Auditor's Office, .....	200.00
Mayor's Office, .....	200.00
Council Chamber Furnishings, .....	770.00
Managers of Public Burial Places, .....	35,035.00
Clerk of Committees Office, .....	150.00
Parks, .....	77,575.00
Law Department Library, .....	500.00
Total, .....	\$3,090,748.00

It would be ungrateful of me if I did not at this time return to the citizens of Quincy my sincere thanks for the honor they have conferred on me for a second time in electing me to the office of chief executive of this city. It is an honor of which I am deeply sensible. During the past year I have given freely of my time to the affairs of the city and have kept in close touch with all the various departments. During the coming year I shall continue to have a personal knowledge of the work of every department under my charge. Our city charter places upon the Mayor the sole responsibility for the administration of city affairs during his term of office, and deeply conscious of that responsibility I will make it my constant effort to conduct the affairs of Quincy during the coming year in a business-like manner. The Mayor and you, gentlemen, have been elected to represent all the people of our city. Let us then work hand in hand and give to the citizens the best that is in us, so that by furthering their interests we may, in a measure, express to them our appreciation of the trust they have confided in us. At all times during the present year I shall be glad to render every assistance in my power to the members of the City Council in discharging their official duties, and I trust that we may all labor together with a common object in view—the welfare of our beloved city.

# Treasurer's Report

---

Jan. 1, 1909.

To His Honor, the Mayor,

Herewith, I submit the annual statement of the City Treasurer for the year ending December 31, 1908:

# Auditor's Report

---

Quincy, Mass., Feb. 22, 1909.

To the City Council, Quincy, Mass.

Gentlemen:—I have the honor of herewith submitting to you the annual report of the Finances of the City of Quincy for the year ending December 31, 1908.

H. O. FAIRBANKS,

City Auditor.

# Annual Appropriations

---

Quincy, Mass., March 2, 1908.

To the City Council:

Gentlemen,—We have the honor to submit for your consideration the following order for the annual appropriations:

Respectfully submitted,

CHARLES M. BRYANT,

JESSE F. CURTIS,

ALEXANDER FALCONER,

OTTO GELOTTE,

J. LEONARD FERGUSON,

ARTHUR C. BEAL,

MICHAEL T. WALSH,

Finance Committee of the City Council.

# City of Quincy

---

In Council:

March 2, 1908.

Ordered:—That the several sums named herein be and are hereby appropriated for the payment of the expenses of the City of Quincy for the financial year beginning January 1st, and ending December 31st, 1908, to be expended by and under the direction of the several officers or boards as herein designated, in accordance with the provisions of the Charter and Ordinances relating thereto.

No contract shall be made, nor expenditure authorized in any case, unless the same shall have been provided for herein, or unless provision shall have been made by special transfer from some of the appropriations herein contained, or by creating a loan.

---

## Report of Inspector of Animals

---

Quincy, Mass., March 2, 1909.

His Honor, Mayor Shea,

Dear Sir:—The following report as Inspector of Animals is submitted:

### TUBERCULOSIS

Tuberculosis took four cows. One pig on slaughtering showed slight lesions of it. This pig was the young of one of those killed last year.

### GLANDERS

Glanders claimed five horses. At two of the stables, all of the remaining horses were tested with antitoxin, and one reacting horse was found in each.

### RABIES

Rabies has been prevalent, though greatly diminished since the muzzling order. The center district had four cases; the Point district three cases; South Quincy four cases, including one horse; West Quincy four cases; Wollaston, two cases, including one cow; Atlantic, two cases, including one cow. In the cases of the two cows and horse, the owners were recompensed from the dog tax funds.

## DOGS

Many dogs have been examined for physicians whose patients have been bitten. Most of the dogs suspected by the owner's have failed to show rabies. Quincy has some very valuable dogs which should be protected from wandering unlicensed, uncared for curs.

We should have a dog officer to gather up stray dogs and return them to owners or if ownerless find takers, and if neither can be done, dispatch them. It is unreasonable to expect a policeman to catch and kill dogs, for he can't hold them to find an owner.

Respectfully submitted,

FRANCIS ABELE, JR.

Inspector of Animals.

# Report of Park Commissioners

---

To the Honorable William T. Shea, Mayor,

Dear Sir:—The report of the Board of Park Commissioners for the year ending Feb. 1st, 1909 is hereby submitted:

The members met at the Mayor's office on March 9th and organized as follows:—Chairman, Dexter E. Wadsworth; Secretary, Charles E. Gill.

Work on parks, playgrounds and bath house began early in March, they were put in proper condition and ready when needed.

On March 28th two communications were sent to the Mayor requesting that the sum of \$500 be appropriated to rebuild the summer house in Merrymount Park. Also asking that John H. Starr and John Brennon be appointed as special constables for Public Bath House and Merrymount Park.

These communications were referred to the City Council at the meeting of that body on April 7th, Starr and Brennan were duly appointed and confirmed and the matter of the summer house referred to proper committees which reported favorably on the same.

The contract for building was awarded to Walter P. Hill of Atlantic who was the lowest bidder. His bid was \$490 and included extending water pipes from the lower field to summer house. The building was completed and accepted by the board on July 31st.

The bath house under the efficient management of Superintendent Starr was taxed to its utmost capacity and was fully appreciated by the thousands of bathers of both sexes who enjoyed the blessings of this great institution.

The lack of ice skating facilities in some of the Wards is to be regretted and early action should be taken to remedy this matter and encourage this clean and healthful sport.

The matter of a substantial increase in the park and play-grounds appropriation should receive attention. With our city's increasing population making a greater demand for the benefits of our public parks and playgrounds it means more material, more labor and more attendants to keep these places up to their present high standard.

Immediate action should be taken regarding the matter of electric light equipment for the bath house. The present system of lighting is inadequate and a menace to safety.

Steps should be taken this coming year to comply with the accepting of the act requiring the equipment of play-grounds.

DEXTER E. WADSWORTH  
CHARLES E. GILL

# Report of Tax Collector

---

To His Honor, the Mayor of the City of Quincy:

---

As suggested by you early in 1908 an examination of the books of this department from 1894 to 1907 inclusive, was made by clerks from the collector's and assessors' offices, acting under the supervision of the Auditor, for the purpose of ascertaining the actual amount due the city, the names of the delinquents and the amount owed by each.

This examination shows that there are many errors in the older books which raise the question whether some of these taxes have been paid or not. It also shows that practically all of the unpaid accounts in the years 1894 to 1901 inclusive are uncollectible.

Lists showing the various items that make up these accounts and the persons owing them were made and are available if desired.

The following is a summary of the unpaid accounts for the years 1894 to 1901 inclusive:

	Poll and Personal	Real Estate	Street Watering	Main Sewer	Particular Sewer	Real Estate Sold to City	Total
1894	\$127.78	\$458.70	\$8.51			\$627.72	\$1,222.71
1895	28.40	806.51	48.43			147.90	1,031.24
1896	196.63 1-2	837.22 1-2	51.60			255.70	1,341.16
1897	11.76	31.61	21.54			275.66	340.57
1898	8.00	465.75	1.10			102.60	577.45
1899	6.00	504.99	3.53			4.80	579.32
1900	207.33	668.82	43.26	8.98	48.26	62.79	1,039.44
1901	315.82	533.94	7.44	30.71			887.91
Total	\$901.72 1-2	\$4,307.54 1-2	\$185.41	\$39.69	\$48.26	\$1,477.17	\$7,019.80

Of these amounts the following is due from the City of Boston for real estate taxes:

1894 .....	\$418.88
1895 .....	399.84
1898 .....	428.40
1899 .....	456.96
1900 .....	433.16
1901 .....	418.88
Total .....	\$2,556.12

I respectfully recommend that action be taken that will permit the abatement of these taxes except those due from the City of Boston.

Respectfully submitted,

TIMOTHY J. CAREY,

Collector of Taxes.

# Assessors' Report

---

Quincy, Mass., January 1, 1909.

To his Honor, the Mayor of the City of Quincy :

We herewith submit our annual report for the year 1908.

Warrants received and amount raised for current expenses by the assessment of taxes in the City of Quincy, for the financial year commencing January 1, 1908, were as follows :

A State warrant for the proportion of  
the City of Quincy of a State tax  
of \$5,500,000.00 ..... \$43,065.00

A County warrant for the proportion of  
the City of Quincy of a County  
tax of \$180,000.00 ..... \$19,362.55

By the provisions of Chapter 488 of the  
Acts of the year 1895, entitled "An  
Act to provide for a Metropolitan  
Water Supply;" Chapter 453 of  
the Acts of the year 1901, entitled  
"An Act to provide for an addi-  
tional Metropolitan Water Loan,"  
we have been assessed for the  
year 1908 ..... \$49,285.01

Of this amount \$11,275.15 is to meet the  
requirements of the sinking fund  
established under said chapter;  
\$31,107.98 is to pay interest, and

\$6,901.88 is on account of the cost of maintenance and operation for the year 1908.

By the provisions of Chapter 406 of the Acts of the year 1895, entitled "An Act to provide for a system of sewage disposal for the Neponset River Valley," and of Chapter 424 of the Acts of the year 1899, entitled "An Act to provide for the construction of a high level gravity sewer for the relief of the Charles and Neponset River Valleys," we have been assessed .... \$27,109.15

Of this amount, \$2,773.91 is to meet the requirements of the sinking fund established under said chapter, \$14,940.40 is to pay interest, and \$9,394.84 is on account of the cost of maintenance and operation for the year 1908.

In accordance with the provisions of Chapter 407 of the Acts of the year 1893, entitled "An Act to establish a Metropolitan Park Commission," Chapter 550 of the Acts of the year 1896, entitled "An Act relative to the Metropolitan Parks and Boulevards," and Chapter 464 of the Acts of the year 1899, entitled "An Act to authorize the Metropolitan Park Commission to take, control and manage Nantasket Beach and adjacent lands and waters," we have been assessed ... \$14,181.85

Of this amount, \$1,977.39 is to meet the requirements of the sinking

fund established under said Chapter, \$5,567.18 is to pay interest, and \$6,637.28 is on account of the cost of maintenance and operation for the year 1908.

In pursuance of the provision of Section 16, Chapter 47 of the Revised Laws (State Highway Tax), we have been assessed .....

\$114.65

Amount raised for municipal current expenses, based on the valuation of December 31, 1907, at \$12 per

\$1,000 .....\$323,040.55

City sewer \$43,580.00, less receipts 32,000.00

City debt ..... 105,670.00

Interest city debt ..... 24,200.00

Street improvement debt ..... 3,300.00

Interest street improvement debt 2,000.00

Park debt ..... 2,000.00

Interest park debt ..... 1,280.00

Interest temporary loans ..... 15,000.00

Aggregate of amount .....

\$661,608.76

9,508 polls, at \$2.00 each, were recorded for assessment and included in the estimate that determined the rate of taxation for the current year .....

\$19,016.00

By the operation of the law providing for the supplementary assessment of omitted male persons liable to assessment under the provisions of Section 19, Chapter 560, Acts of 1907, there were added 123 polls, making the number assessed 9,631, excluding 69, which are exempt

under the provisions of Chapter 367, Acts 1907.

The amount of estimated receipts lawfully applicable to the payment of expenditures of the year, as provided in Chapter 12, Section 37, R. L., were deducted ..... \$68,732.11  
 To which was added for overlay, as provided in Chapter 12, Section 55, R. L. .... 12,750.34

### SUMMARY OF AMOUNT COMMITTED TO THE BOARD OF ASSESSORS

Appropriation order .....	\$323,040.55
Debts and interest .....	153,450.00
Water debt, maintenance and interest.	78,794.50
Sewer debt, maintenance and interest.	43,580.00
Metropolitan water assessment .....	49,285.01
State tax .....	43,065.00
County tax .....	19,362.55
South Metropolitan sewer assessment .	27,109.15
Metropolitan park assessment .....	14,181.85
State highway tax .....	114.65
Total	<hr/> \$751,983.26

### VALUATION

The valuation of the city May 1, 1908, as determined by the assessors, and upon which the rate of taxation was levied, is as follows:

Value of land .....	\$10,517,350.00
Value of buildings .....	12,671,025.00
Total	<hr/> \$23,188,375.00

Exemptions as provided in clauses 9 and 10, Section 5, Chapter 12, R. L., also Chapter 367, Acts 1907 ...	113,225.00
Total valuation of real estate subject to taxation .....	\$23,075,150.00
Valuation of personal property other than bank stock separately as- sessed .....	\$5,303,525.00
Value of shares of National Banks located in and taxable in the City of Quincy .....	231,715.00
	<hr/> 5,535,240.00
Total valuation .....	\$28,610,390.00
Tax rate .....	\$20.50
Taxes levied on property polls, per- sonal and real estate .....	\$585,429.68
The valuation was also increased by assessments under provisions of Section 85, Chapter 12, R. L. ....	\$38,500.00
The total valuation of the city upon which taxes were assessed for the year 1908 when all assessments were made, was .....	\$28,648,890.00
A net gain over 1907 valuation of ....	\$1,461,135.00

## VALUATION BY WARDS

(Not including valuation of bank stock)

	Personal	Real Estate	Total
Ward 1 .....	\$1,723,525.00	\$6,842,325.00	\$8,565,850.00
“ 2 .....	2,242,600.00	3,350,850.00	5,593,450.00
“ 3 .....	406,875.00	2,647,075.00	3,053,950.00
“ 4 .....	344,975.00	2,393,950.00	2,738,925.00
“ 5 .....	439,800.00	4,525,500.00	4,965,300.00
“ 6 .....	145,750.00	3,315,450.00	3,461,200.00
	<hr/> \$5,303,525.00	<hr/> \$23,075,150.00	<hr/> \$28,378,675.00

## SEWER ASSESSMENTS

Main sewer apportionments .....	\$9,646.30
Interest on main sewer apportionments .....	1,986.01
Particular sewer assessments apportioned and otherwise .....	3,047.66
Interest on same .....	389.82
Sidewalk assessments, apportioned ....	\$146.31
Interest on same .....	24.67

## Street Watering

Street watering assessments committed by the commissioner of public work, in accordance with City Council order No. 70, passed April 6, 1908 .....	3,644.18
----------------------------------------------------------------------------------------------------------------------------------------------------------------	----------

## Suppression of Gypsy and Brown-tail Moths

In accordance with Chapter 381, Acts 1905, as amended by Chapter 268, Acts 1906 and Chapter 521, Acts 1907, the commitment of the com- missioner of public works amount- ed to .....	2,199.19
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------

## Summary From Table of Aggregates

Resident property owners .....	4,812
Non-resident property owners .....	2,183
Poll tax, only .....	7,681
Number of horses assessed .....	1,208
Number of cows and meat cattle .....	754
Number of swine .....	12
Number of dwelling houses .....	5,615
Number of acres of land .....	6,687

## Valuation of Property Exempt From Taxation

Literary .....	\$279,925.00
Benevolent .....	642,950.00
Religious .....	374,275.00
City of Quincy, real estate and fire apparatus ...	1,023,800.00

The Assistant Assessors who served during the year were:

James P. Dunn .....	Ward 1
Joseph A. Delory .....	Ward 2
Leo J. McMasters .....	Ward 3
Edward T. Monahan .....	Ward 4
John T. Cain .....	Ward 5
Gerald A. Sullivan .....	Ward 6

The polls returned by the assistant assessors, and those registered for the year, amounted to 9,700, an increase of 359 over the year 1907, made up as follows:

	Precinct 1	Precinct 2	Total
Ward 1,	774	1,057	1,831
Ward 2,	940	980	1,920
Ward 3,	874	920	1,794
Ward 4,	700	933	1,633
Ward 5,			1,390
Ward 6,	569	563	1,132

The personal property consisting of horses, carriages and cows, assessed by the assistant assessors, is as follows:

Ward 1, .....	\$81,550.00
Ward 2, .....	35,575.00
Ward 3, .....	39,625.00
Ward 4, .....	58,025.00
Ward 5, .....	42,475.00
Ward 6, .....	14,150.00
Total	<hr/> \$271,400.00

The number of dogs returned by the assistant assessors, is as follows:

Wards	1	2	3	4	5	6	Total
Male,	172	141	163	172	211	158	1,017
Female,	27	24	17	15	33	41	157
Kennel,		1			1	2	4

During the year the Commissioner of Public Works has notified the assessors of 83 apportioned main sewers, and 301 particular sewer assessments. With these additions, the total number of individual accounts now kept in this office, is as follows:

Main sewer assessments .....	1,883
Particular sewer assessments .....	314
Street sprinkling .....	1,810
Sidewalk assessments .....	25
Gypsy and brown-tail moths .....	317

It is evident that Quincy is developing rapidly. In viewing the properties the past year, we noted with satisfaction a marked increase in building activity and land development.

Heretofore, the natural growth of the city has been retarded by the persistent refusal of the owners of large areas to put them on the market. This was particularly true of the northern section of the city, in Wards Five and Six. This development and building activity, in a large measure, accounts for the increased valuation of 1908, which has occasioned some complaint in certain sections. We find upon examination, however, that it arises in districts where the improvement and sales of real estate fully demand and justify the increased valuation.

Taxation of personal property presents a more difficult problem. The present laws of the State request the inhabitants to make returns to the assessors, under oath. Few persons can or will make such returns of their personal estate, and the law is more or less of a dead letter. Under such circumstances, it is incumbent upon the assessors to tax in-

tangible personal property by the method of arbitrary estimate or "doomage." While this has met with some antagonism, the conservative attitude of those so taxed would seem to justify our action in this regard.

Commensurate with this development is the work of the assessing department, and the consequent demand for additional office accommodation. The present system of recording is most accurate and requires much detail work. Each and every property owner has a record card in duplicate, which, exclusive of the betterment assessments, involves the indexing and posting of over nineteen thousand accounts. These records are invaluable to the city and must be preserved. We request that an additional safety vault be given to insure their protection.

The assessors' office is a place of public record, and is much frequented. We urge that additional office space be given this department.

A word of thanks is due the head clerk of the department through whose good offices the State law was amended whereby the valuation of resident and non-resident property owners are now exhibited under one list.

The work of the assessors in Ward Four is much handicapped by not having the assessors' plans. This ward covers an extensive territory containing large and irregular properties difficult of identification. We sincerely hope that the plans may be forthcoming in the near future.

Respectfully submitted,

WARREN W. ADAMS,

J. WINTHROP PRATT,

JOHN A. DUGGAN,

Assessors of the City of Quincy.

# Report of Inspector of Milk

---

Quincy, Mass., January 1, 1909.

To His Honor, the Mayor of the City of Quincy:

In submitting to you the annual report of my department I would respectfully call your attention to the serious matter of adequate inspection of the milk supply of our city. Complaints of poor milk have been unusually numerous during the past year, while lack of funds and apparatus leaves the inspector helpless to remedy matters.

The Board of Health have reinforced the milk inspection department by passing the set of regulations for the care and sale of milk as recommended in my report of last year. In order to enforce these regulations, which if properly observed would insure the city a clean and wholesome milk supply, we must have an appropriation to establish and maintain a laboratory where analyses of milk can be properly made.

Appreciating the need of rigid economy in all departments and also the possibility of the State Board of Health assuming full control of milk inspection in the near future, I recommend that five hundred dollars be appropriated for the purpose of conducting a systematic inspection of our milk supply during the year. Expert help and laboratory facilities to this end may be obtained at a reasonable cost.

The fees for licenses collected this year amount to forty-one dollars.

Yours respectfully,

WILLIAM G. CURTIS, M. D.

Inspector of Milk.

# Thomas Crane Public Library

---

## REPORT OF TRUSTEES

---

*To His Honor the Mayor of the City of Quincy:—*

The Trustees of the Thomas Crane Public Library submit herewith their annual report, it being the 38th of the whole series since the establishment of the library.

The changes that have taken place since our last report have been very considerable, amounting to no less than a complete remodeling of the entire library without and within. No one unless closely connected with it can appreciate the confusion and difficulty with which the work of administration has been carried on. It at last became wholly impossible for the librarians to continue the work of circulation and the library was closed for an indefinite period. Constant delays in connection with the remodeling of the interior, while unavoidable, retarded the time of reopening. But the end came at last and the trustees flatter themselves that there is no more fully equipped building of its size in the country. In beauty of effect it leaves little to be desired. It must be a cause of satisfaction to the generous donor, as it certainly is to the recipients of his gift. Besides the addition to the library building, the grounds have been regraded and the walks and driveway on the east side have been re-paved, and tiles have been laid the entire length of the sidewalk on the northern and western sides.

Another important item of expense was the renovating of

the interior of the old building. Nothing had been done to the woodwork during the twenty-six years of its life. A contract was made with a vacuum cleaning company of Boston for the entire renovation of books and building. But it was found that while the vacuum process was sufficient for the books it did not answer for the carving. That had to be cleaned by hand and it was most carefully gone over with oil and turpentine. The result justified the pains expended. A large case for the preservation of newspaper files was placed in the main hall.

As might be expected, there have been during the year large arrears of work to be made up. The binding bills have been very heavy, the library having suffered from a long period of poor binding and of neglect from lack of funds. A large number of the books had reached that period when the need for rebinding was imperative. With regard to the circulation this has naturally fallen off during the year. It could not well be otherwise. Concerning this we refer to the librarian's report.

The clientele of the library is changing decidedly. There is an increasing demand for books of a technical and scientific character. But such books are expensive and if we purchase them in any number our appropriation must be increased. It is necessary for us to have a sufficient number of periodicals to supply the reading room. The accommodations there are ample and there is no pleasanter place in which to pass a leisure hour. But we must give the public something worth their coming.

The expense of running the library has very nearly doubled while the appropriation has not greatly increased. The trustees feel that the library is handicapped, that additional expense having to be subtracted from the money available for the purchase of books.

The most attractive part of the library is the children's department. Their reception of it leaves nothing to be desired except more books, of which there is a beggarly display. The children are joyous, eager, careless; and yet not much more careless than some of their elders. The little men and women have done well, considering all things, but they must have a larger variety of books. There are about four children to one book.

For the details of the administration of the library the trustees refer to the carefully prepared report of the librarian.

The trustees, in closing their report, regret to have to record the untimely death of the architect of the addition, Mr. William M. Aiken of New York.

Respectfully,

ELLERY C. BUTLER,  
HENRY McGRATH,  
GEORGE F. SAWYER, JR.,  
GEORGE W. MORTON,  
CHARLES R. SAFFORD,  
HARRISON A. KEITH,

*Trustees.*

## REPORT OF THE LIBRARIAN

---

QUINCY, MASS., January 1, 1909.

*To the Trustees of the Thomas Crane Public Library :—*

I have the honor to submit my report for the year ending December 31, 1908.

In summing up the work of the year this report naturally divides itself into two sections, before and after the closing of the library to the public.

Beginning with the first of January, the library service continued under even more difficult conditions than hitherto, with the circulation for the first two months a trifle larger than for the same period in 1907. As the process of examining the entire collection went steadily on in the continued work of preparation for the new charging system and of getting the juvenile books ready for their new quarters, many hundreds of volumes were found unfit for circulation and were sent off to the binder or recorded for replacement.

In the remodeling of the main building and change from an alcove book room to a reading and reference room, having been crowded into smaller and smaller working space, when, finally, the delivery desk and its artificial lighting were taken away we were obliged to close the library for the delivery of books on March 16. The building was still kept open during the daytime until April 1 for the return of books, and any one was welcome to come for reading or reference work. We had a few such visitors but no statistics were kept.

As the library had to remain closed a much longer time

than was anticipated on account of delays and changes incident to the interior work on the building, a successful effort was made to be ready at the reopening to put the new charging system into effect at the main delivery desk as well as in the children's room. Behind the closed doors all the staff worked their regular number of hours per week except the librarian, who was there in season and out of season, and the Easter vacation of the pages was most opportune. All the books in the library were cleaned by the vacuum process. Those from the old book room were then, the last week of April, removed to the stack room, read by shelf list, and the actual number of books in the library in each class counted.

Some idea of the labor and confusion and methods during the calendar year from May until May may be gained from the fact that, owing to the remodeling or renovation of the whole of the old building before the completion of the new stack room, every book in the library had to be moved twice, many of them a third time, some of the periodicals even a fourth, because of delay of the wide shelving. To have a new building and move into it is one thing, to have one in which you are living remodeled and enlarged, is quite another matter, as the librarian knows, having experienced both; and they have their attending compensations. To see a structure grow from the wholly satisfying charm of a small building into double its capacity without losing artistic effect in that spaciousness and better adaptation to the needs of today, is a pleasure that the less difficult experience does not give.

At last, after the carving and entire woodwork, including ceiling, had been cleaned, the other half of the delivery desk, gone astray in transit, had been put in place, the work upon the leather finished and carpets laid, upon Memorial Day, twenty-six years after the original gift to the citizens of Quincy, the new Crane Memorial Hall was in readiness for Mr. Crane's visit.

Even then, details of the interior finishing and fitting up of the main building and the children's room remained to be completed to make them ready for use. It was, therefore, not until June 20 that the building was open for public inspection from 3 until 9 o'clock P. M., when it was thronged with appreciative visitors. The library was reopened for the delivery of books on

Monday, June 22, although carpenters and decorators were still finishing their work.

---

A new registration was begun with the reopening of the library and the number of borrowers at date is 2,975, of which 769 are registered in the children's room. Each borrower is recorded both by his name and by the registration number assigned to him.

In 1908 the library was open only 226 days, or, in other words, was closed for a period of three months and five days. The circulation returns show a falling off of about 12,000 volumes from the number delivered the previous year. A glance at the report of the trustees for the year 1882, that of removal from the old church building on Hancock street to Crane Memorial Hall, during which year the library was closed about one month less, shows that this is a repetition of the experience of that year. Conditions under which the circulation for the year 1907 was maintained were so abnormal that it is not surprising that the falling off that year from that of 1906 was about 10,000. So far as statistics go, therefore, both years are exceptional and should not be taken into account. Since June, however, as well as at the beginning of the year, there has been a steady gain over those months of last year. This shows that the loss is due entirely to the closing of the library, and that the circulation is on the increase is further proved by the fact that there is also an increase for the past six months of about 3,500 over the corresponding six months of the year 1906.

A glance almost any afternoon or evening shows that the new reading and reference room is appreciated for its combination of utility and beauty. No record is kept as to the number of visitors or readers in the room or the use of reference books, the 3,610 volumes unclassified as library use in the statistics appended to this report meaning only those books delivered over the desk for use in the room. More and more is advantage taken of the Wednesday morning opening, a specially quiet time for study. All books added are placed in the book-cases

here for a year, as usual, and shelves of older fiction in rotation are put here from time to time, a record being kept of these. We have tried to come into closer relation with the work of the study clubs by selecting books bearing on their subjects and reserving them two weeks for their use. In a word, the aim is never to let anybody go away without finding what he wants if within our power to find it. But that means, beside the willingness to search, that the library should be fully equipped with the books that furnish the information.

The stack room is a great improvement in light and room for the books, hitherto crowded and dark; but there is more surface to cover because the books are so many feet farther away from the delivery desk than in the older building. This, with the going up and down stairs, requires more assistance in order not to retard the delivery.

The circulation of unbound periodicals is so large a factor, in itself about one-sixth of the work at the delivery desk, that it would simplify matters there if it could be taken away from it. But as that would increase the assistance needed it can not be done at present. The new charging system requires the insertion of pockets in all periodicals as received. The list of periodicals subscribed for is very large for a library of this size and almost every one of them circulates freely as currently received. The wear and tear is greater now that they are no longer handed over the desk, but placed in the cases outside, a freedom greatly appreciated by the public. Some of the numbers of the more popular ones are frequently not in condition to bind. We would like to afford to take another copy of these, place in covers for the reading room, and use for binding. The list of periodicals received has been revised the past year, a few having been discontinued but more added, and will be found at the end of this report.

The number of books rebound this year is exceedingly large and the bills are therefore correspondingly so, although the cost for the same binding is more reasonable than that of any other library with which I am acquainted. Many books are repaired at the library, but it is not a wise economy to keep a book in circulation when in need of rebinding or to attempt to do what may interfere with the best results in rebinding.

Previous to the reopening, the card catalogue of the juvenile department of over 2,000 volumes, which had been partly rewritten in anticipation of a change, was completed and revised. A brief shelf list was made for the use of the children's librarian, the fuller shelf list being kept in the cataloguer's room.

The total number of books in the library hitherto stated has been only an approximate estimate, the books discarded each year not having been subtracted. This accounts for the fact that the total number of books in the library on Dec. 31, 1908, namely 25,857, made by actual count and based upon the shelf list reading in May, is smaller than that estimate. This May reading by shelf list showed that 150 books were missing from the shelves since the last inventory in February, 1907.

I think the most popular room in the library is the new children's room, and certainly some of the most useful work of the library is done there. During the summer the room was open afternoons and Saturday mornings. In September the hours were changed so that when the schools were in session the room was closed, with the result that when the near-by school is not in session, from 11.30 A. M. to 1.30 P. M., and from 3.30 to 6 P. M., the room is filled with children. Large as it is, it is none too large, and sometimes, especially upon Mondays, it is exceedingly difficult to exercise the necessary supervision. The coming of so many children all at once makes congestion for an hour or so and requires extra assistance.

The largest day's circulation from this room was 165, on Nov. 2, and the smallest, 18, on Dec. 24. No statistics were kept of the books read in the room or used for reference. In a total circulation of 11,802, a percentage of fiction of 57.7 shows that the open shelf system is doing a good work, although the wear and tear of the books is certainly greater. Every two months the books are read by shelf list, and thus far nine volumes are missing. No child is too young to be admitted so long as he keeps reasonably quiet. The behavior, generally speaking, is excellent, showing that the children appreciate the attractions of their new room.

Through the inter-library loan system we have been en-

abled to accommodate borrowers with 13 volumes from the Boston Public Library. Also the art department of the Forbes Library of Northampton, Mass., kindly sent us freely from its large collection of pictures all that were needed for two art afternoons of one of the study clubs. Since June the library has had on exhibition 13 sets of pictures from the Library Art Club, to the great pleasure of those who have visited the art gallery with its attractive background of red and gold Japanese leather paper.

In September Mr. H. H. Schumacher resigned his position as assistant in charge of the circulating department to attend the divinity school of Harvard University. His courtesy and willingness to oblige were greatly appreciated, especially during a time of upheaval. The position was filled October 1 by Miss Katherine L. Stegmaier, a graduate of Simmons College library school.

I cannot close this report without thanking the trustees for continued support and many kindnesses, and commending the staff, each and all, for the cheerful and ready response to the continuous demands upon their industry and patience. The spirit of harmony and interest which prevails makes work with them a pleasure.

Appended are the statistics for the year.

Respectfully submitted,

ALICE G. WHITE,

*Librarian.*

Dec. 16 M. I. Gatecomb, use of horse and inci- dental expenses of office .....	44.22
Dec. 16 L. J. McMaster .....	45.00
Total .....	\$125.00

Yours respectfully,

MAURICE I. GATCOMB,  
Sealer of Weights and Measures.

## Report of Overseer of Poor

---

To His Honor, the Mayor of the City of Quincy:

In compliance with the ordinances of the City, the following report of this Department for the year ending December 31, 1908, is respectfully submitted.

Owing to unusual business depressions, the shutting down of the Granite business in the early part of the year, the stringency of money, and many large Corporations running on half time, the calls for aid have been numerous. There is a large number of unemployed, many of them with large families, who have been compelled through necessity, to apply to this Department for aid. It has been my policy to obtain employment for as many of these as possible, in this way trying to make them self supporting.

We have here, as in other places, two classes of poor, the worthy, and the unworthy. We are called upon often to assist both classes, and how best to do this is a problem worthy of serious consideration. After supplying aid, as the nature of the case demands, a history of the case is taken to determine the legal settlement. This requires a careful search and inquiry, as the settlement is frequently traced back to the parents, and in some cases, to the grandparents. Therefore, a fair knowledge of pauper settlement law, and a thorough search, is required, in many instances.

The Almshouse, and the buildings connected with it, are badly in need of repair. The Almshouse needs painting on the outside, and the piazza floors should be repaired.

The Smoke House used by the men, and also the stable, should be resingled, as these buildings are in bad condition.

The interior of the Almshouse requires many things. All of the window shades ought to be replaced. Several pieces of furniture, a carpet in the hallway, chairs and beds, are getting worn out, and are not in keeping with the rest of the house.

Our City is growing in population every year. New industries settling in our midst, bring the poor with them, at times. These must be provided for, even though they have no settlement in Quincy. Our City charges this up to other cities and towns, or to the State, as the case may be, and later is reimbursed, the money going into the City Treasury, so that it can readily be seen that these industries are a benefit to the City, to the business men, and to all who have an interest here.

Through the generosity of one of our citizens, C. C. Johnson, there was left in trust to the City of Quincy two thousand dollars, which was placed in the Savings Bank, the interest of which was to be used for the deserving poor of our city each year at Thanksgiving, to be known as The Johnson Fund. With this money turkeys are distributed among the poor. In 1908 we had eighty-one dollars to spend. Seventy-four families received a turkey, or a chicken, with vegetables. When this money was donated to the town, we had only a few poor families. But now the number of poor has increased many times, and one can readily see the problem that the Overseer has to work out at Thanksgiving time. I hope before another year, that some one of our generous citizens will see that another one hundred dollars at least, will have been added to this fund, to gladden the hearts of these poor people.

The Elks of our City are doing many charitable works, among them sending out to the worthy poor, at Christmas, about one hundred and thirty baskets, filled with all the good things of the season, each basket including a turkey. The cost of this was about four hundred dollars. It was my pleasure to see these baskets before they were delivered, and these poor people must have appreciated them very much.

About six hundred, in all, ate their Christmas dinner through the generosity of the Elks of our City.

The sick have been carefully attended to by Dr. Hallowell, our City Physician. To those in the Almshouse, and to those outside needing his services, he has been a very careful official, always thoughtful for those coming under his care, and always ready night and day, to alleviate the sufferings of the poor.

\* I wish to take this opportunity to thank all those who have assisted me in any way, and especially I wish to thank the Charitable Societies for the kindness and aid they have rendered me during the past year. I also wish to thank the Superintendent and Matron at the Almshouse, who have faithfully carried out all orders issued by the Overseer.

The following is the financial statement for the year:

Appropriation .....	\$13,005.45
Expended Outside Poor .....	\$6,558.85
Expended Almshouse net .....	3,780.66
Expended 1907 Deficit Bills .....	1,831.09

---

Total Amount expended December 31, 1908. \$12,170.60

---

#### EXPENSE OF THE OUTSIDE POOR

# Report of City Physician

---

Quincy, Mass., January 1, 1909.

To His Honor, the Mayor of the City of Quincy:

Sir:

I have the honor to submit the following as the report of the City Physician for the year ending December 31, 1908.

Visits to Almshouse .....	23
Visits to Outside Poor .....	165
Cases of Childbirth .....	4
Office visits and Vaccinations .....	75
Visits to Police Station .....	19
Deaths .....	2

Very respectfully,

HENRY C. HALLOWELL, M. D.,

City Physician.

# Public Burial Places

---

Quincy, Mass., January 1, 1909.

To His Honor the Mayor:

The Managers of Public Burial Places respectfully submit the following report for the year 1908.

In the supervision and general care of the Public Burial Places, it has been the policy of the managers each year to grade and divide into lots a section of the unimproved land in Mt. Wollaston Cemetery. This policy has been continued during the year 1908 over as large an area as was possible without exceeding our appropriation. There is yet an unfinished section adjoining Sea street, north of the main entrance, which we hope to see completed during the coming year.

The income from the Charles E. French fund has been expended in accordance with the terms of the will, on the Hancock Cemetery. This sum added to what could be taken from the usual appropriation, is barely sufficient for the ordinary care of the grounds, and we earnestly recommend that a special appropriation be made to rebuild the wall on the Hancock street side of the cemetery.

The resources, expenditures and receipts of this department for the year ending December 31, 1908, are as follows:

	Resources	Exp'tures	Balance
Appropriation of 1908 ...	\$4,000.00		
Balance of appropriation of 1907 .....	74.29		
Receipts from foundations and regrading .....	699.65		
Income from the several funds .....	1,179.02		
Total .....	\$5,952.96		
Salaries .....		\$1,074.96	
Extra Clerical work .....		50.00	
Payroll, labor .....		4,322.08	
Cemetery supplies & equipment .		253.48	
Office supplies, telephone, etc. ..		76.22	
Total .....		\$5,776.74	
Unexpended .....			\$176.22

#### Receipts Paid into City Treasury

Care of lots .....	\$1,774.50	
Sale of lots .....	2,170.00	
Opening graves .....	990.00	
Foundations and regrading .....	699.65	
Income from trust funds .....	1,179.02	
Miscellaneous .....	57.00	
Total .....	\$6,870.17	
Excess of rec'ts over expenditures		\$1,093.43

#### Perpetual Care Fund

Amount of fund Jan. 1, 1908 .....	\$24,713.00	
Plus accrued interest .....	1,003.23	
Plus amount added during the year	1,350.00	
Total .....	\$27,066.23	
Less amount paid for care of lots	1,003.23	
Amount of fund Dec. 31, 1908		\$26,063.00

## C. C. Johnson Fund

Amount of fund Jan. 1, 1908 .....	\$150.00	
Plus accrued interest .....	6.06	
Total .....	\$156.06	
Less amount paid for care of lot	6.06	
Amount of fund Dec. 31, 1908		\$150.00
Charles E. French Fund .....	\$3,000.00	
Plus accrued interest .....	169.73	
Total .....	\$3,169.73	
Less sum used in care of Hancock Cemetery .....	169.73	
Amount of Fund Dec. 31, 1908		\$3,000.00

## Statistics

Total number of interments in 1908 .....	259
Mt. Wollaston Cemetery .....	258
Hancock Cemetery .....	1
Adults .....	151
Under 21 years of age .....	108
Died in Quincy .....	182
Died in other places .....	77
The total number of lots cared for in 1908 ....	765
By perpetual care .....	190
By yearly contract .....	575

Respectfully submitted,

ALBERT W. FAY, Chairman,  
W. W. MITCHELL, Clerk.

JOHN Q. CUDWORTH,  
A. O. DIACK,  
J. H. VOGEL,  
Managers of Public Burial Places.

# Report of City Solicitor

---

Quincy, Mass., Feb. 1, 1909.

Hon. William T. Shea, Mayor,

Dear Sir:—I herewith submit my report as City Solicitor for the past year:

## GRADE CROSSINGS

The commission appointed in 1907 to determine and report to the Superior Court plans for the abolition of the Saville and Water Streets grade crossings, held several public hearings in the Council Chamber, City Hall, during the year.

Plans were submitted by the city, the New York, New Haven & Hartford Railroad Company and other parties interested.

The city's plan in each case provides for the depression of the tracks of the railroad company and an overhead street bridge on the lines of the present crossing with approaches with easy grades.

The hearings were completed January 16th, 1909, and the Commissioners now have the matter under advisement.

## LEGISLATIVE MATTERS

Early in the year 1908 I represented the city before a committee of the Legislature and opposed a bill providing for the construction of a new bridge across the Neponset River between the cities of Boston and Quincy.

The Legislature by a resolve referred the matter to the Metropolitan Park Commissioners with instructions to investigate and report to the Legislature of 1909, on the desirability of such a bridge.

Later in the year the Commissioners gave a public hearing to all parties interested.

I attended the hearing and stated in behalf of the city that Quincy considered its portion of the bridge in very good condition, and that at most it would require but the expenditure of a small sum to put it in a condition that would meet the requirements of the public over it for several years; that the Boston end of the bridge needed rebuilding, there was no reason why Boston should not do this work itself, and that under the circumstances, Quincy would strongly protest against being obliged to expend a large sum of money for the purpose of building a new bridge.

The Metropolitan Park Commissioners on January 11, 1909, reported to the House of Representatives as follows:

“The existing bridge referred to in the resolve connects Neponset Avenue in Boston with Hancock Street in Quincy, and forms part of the main highway between the eastern part of Boston and the cities and towns south and southeast of Neponset River. It has no present connection with any portion of the park system, but forms part of the only direct road by which connection may be made with park roads to Quincy Shore and to the easterly end of Blue Hill Reservation. It is an old-fashioned pile structure, of which a portion 135 feet long, including the draw, is within and is maintained by the city of Boston; and the remaining portion, 600 feet long, is within and is maintained by the city of Quincy. The Boston portion has a roadway 24 feet wide, with one side-walk five feet wide, which narrows to 22 feet and 3 feet respectively across the draw. The Quincy portion has a roadway 32 feet wide, with sidewalk 7 feet wide. The draw is a two-leaf hand-lift steel bascule draw, of 38 feet opening for vessels, above a channel which, curving 75 feet nearer the Boston side of the river than the draw opening of the new railroad bridge a short distance below, makes the passage of vessels very difficult.

The Boston portion of the bridge is in a bad condition, and is likely soon to become unsafe. The Quincy portion of the bridge is in fair condition, but will require repairs within a few years at an estimated cost of \$7,500, which the engineer estimates is an amount equal to the entire present value of this portion of the bridge.

Upon these facts and after personal inspection of the bridge and its approaches, the Board is of the opinion that it is desirable that the entire bridge be rebuilt at once upon its present location of a width of 60 feet, with steel girders upon concrete or stone piers ;and that the sidewalks be 8 feet wide; the roadway 44 feet wide, paved with wooden block, with location for two car tracks in the centre; and that the draw be relocated over a new channel in alignment with the railroad bridge, and be built of the single-leaf rolling type, operated by electricity, with an opening 50 feet wide for vessels. It is recognized, however, that only the Boston portion is unsafe and inadequate for present needs. If, for this reason, it be deemed advisable to postpone rebuilding the Quincy portion of the draw, the Board recommends that the Boston portion be rebuilt at once in the form suggested above, and that at the same time the channel be relocated and enough of the Quincy portion be rebuilt of a relocation of the drawbridge over the new channel and in alignment with the railroad bridge draw below.

The Board has given careful consideration to the relation of this bridge to any existing or proposed boulevards in its vicinity, and is of the opinion that, if rebuilt in its present location ,as suggested, and with double-rail location for cars in the centre and paved with wooden block, it will furnish comfortable and adequate accommodations for all pleasure travel which now needs to be provided for, if there is any extension of the boulevard to its neighborhood.”—(House Bill No. 1,246.)

The bill is now pending before the Committee on Roads and Bridges of this year's Legislature. The committee will give a hearing on this matter in the near future.

If a new bridge is constructed as suggested by the Metropolitan Park Commissioners the expense of the construction and maintenance of the same should not be borne by Boston and Quincy alone. The Counties of Norfolk and Plymouth and the towns and cities of the Greater Metropolitan District and also the Commonwealth should be compelled to bear their share of the expense.

The City Council on January 4th, 1909, requested the Mayor to petition the Legislature to amend the City Charter so that the Mayor would be the chairman of the School Committee, ex-officio, without the power of voting.

Under instructions received from the Mayor I prepared and caused to be filed with the Legislature a petition with a bill accompanying the same to that effect. The bill provides that the act be submitted to the voters for their acceptance or rejection. (See House Bill No. 469.)

A mass meeting of the citizens of Quincy was held in the Council Chamber, City Hall, in January, 1909, in response to a call issued by the Mayor. At the meeting it was unanimously voted that, it was desirable to have all reference to political parties eliminated from the ballots to be used at the Municipal caucuses and elections. I prepared a bill to that effect. It was signed by the Mayor and duly filed with the Legislature. The bill provides for the submission of the act to the voters before its taking effect. (House Bill No. 770.)

At the request of the Mayor I prepared and had filed with the Legislature a bill authorizing the city to pay a sum not exceeding \$15,000, to the City Hospital of Quincy, and annually an amount not exceeding \$2,500, toward the maintenance of a ward on the grounds of the hospital for the reception and care of such persons suffering from diseases dangerous to the public health as the Board of Health may order admitted thereto. (House Bill No. 473.)

## ACTIONS AND CLAIMS AGAINST THE CITY

Early in February, 1908, the Mayor removed Charles H. Johnson, as Assessor of the city and assigned as his reason for so doing "the good of the service."

February 21st, 1908, Mr. Johnson filed a petition in the Supreme Judicial Court for a writ of mandamus commanding the Mayor to reinstate him as an Assessor.

The petition was heard by Rugg, J., who ordered that the petition be dismissed, and later at the request of the petitioner, Mr. Johnson, reported the case to the full Court. The case was submitted on briefs and the Court on May 1st, 1908, dismissed the petition.

The decision in this case disposes of all doubt as to the Mayor's power to remove a member of the Board of Assessors. The Assessors like other administrative officials are held accountable to the Mayor for the manner in which they discharge their duties. The case is reported in 198 Mass., 411.

On or about May 10th, 1907, the city laid a drain or common sewer through land of private owners between East Squantum Street and Quincy Shore Reservation. Five of the parties affected thereby in April 1908, filed petitions in the Superior Court against the city praying for the abatement of the assessments levied on their property on account of said extension of the sewerage system and seeking to recover damages against the city on account thereof. These actions are now pending.

On December 8th, 1908, the Finnish Workingmen's Association "Veli" of Quincy, filed a petition in the Superior Court for Norfolk County seeking to have a tax levied by the Assessors on its property declared illegal and abated on the grounds that its property was exempt under the provisions of the Revised Laws, Chap. 12, Sect. 5, Clause 3.

On the evidence submitted to me I do not see how the Board could legally refrain from taxing the property of the Association. As the Board of Assessors on October 14, 1908, refused to abate the tax and on that date so notified the Association, the petition not having been filed till December 8, 1908, in my opinion it was not seasonably filed. The action will be tried at the present February sitting of the Court.

During the year several claims against the city for damages arising out of accidents occurring within the limits of the highways of the city were filed with this department. Many

of these claims have been settled, as the amount of damages claimed was very small, and it seemed better judgment to compromise the claims rather than put the parties to the expense of a trial in Court. In no case have I made a settlement when I was not satisfied that there was liability on the part of the city.

Of the cases pending in the Superior Court when I assumed office, the following have been disposed of, viz:

Taylor et al vs. Quincy.

Duggan vs. Quincy.

Rogers vs. Quincy.

In compliance with the provisions of the City Charter I have attended all sessions of the City Council held during the year, and advised the City Council as to the law applicable to matters pending before it, whenever my opinion was requested.

My department has been at the service of the different administrative officials and municipal boards during the year, and whenever requested I have advised concerning legal matters, prepared contracts, etc., connected with the work of said officials and boards.

Respectfully submitted,

JOHN W. McANARNEY, City Solicitor.

# Police Department

---

To His Honor the Mayor of the City of Quincy :

I herewith submit the annual report of the Police Department for the year ending December 31, 1908.

## ENFORCEMENT OF THE LIQUOR LAW

The sale of intoxicating liquor at the present time is under very good control. The Fore River District is fairly clean and few complaints were received from that quarter. Houghs Neck was well policed during the summer months and the club element was taken care of to the satisfaction of the majority of the residents of the beach.

The permits to transport intoxicating liquors into Quincy are such valuable franchises to those to whom they are granted that the expressmen are taking no chances of having their permits revoked. Acting Inspector Goodhue, who handled the larger part of the liquor work has done excellent work and no small part of the credit is due him for the results obtained.

A wholesale cleanup of a certain locality in the westerly part of the City was accomplished almost entirely by his efforts and a much needed improvement was noticed at once.

Total number of cases brought before District Court	21
Found guilty in District Court .....	15
Found not guilty in District Court .....	4
Appealed to Superior Court .....	6
Found guilty in Superior Court .....	4
Continued to April term .....	2
Fines paid in District Court .....	\$350
Committed for non-payment of fines .....	3
Total number of liquor raids .....	17
Cases where liquor was found .....	16
Cases where no liquor was found .....	1
Cases where liquor was forfeited .....	15
Cases where liquor was ordered returned to owners	1

## CONCLUSION

In closing this report I would recommend that the position of the Acting Inspector be made permanent. This position was created in 1904 and has been filled by one of

the permanent patrolmen since that time. This officer could be given charge of the liquor work and could also be used for extra detective work and juvenile offenders of whom we have quite a few. I would also recommend the appointment of at least three additional patrolmen, one to be stationed on Wollaston Hill during the night, one to cover Wollaston during the day and one to substitute in turn for the permanent police who are now allowed one day off in thirty by the Acts and Resolves of 1908, Chapter 476.

The cells installed at the Fire Station at Houghs Neck by the Commissioner of Public Works have filled a long felt want and have saved many a long run to that section of the City.

The year of 1908 has been an active one for the police and more breaks have been reported than usual. Nearly all of these have been of the same general character, made during the early evening while the family were away. Part of these have been cleared up by the capture in Roxbury during the early part of 1909 of two very clever crooks in this line of business who have been held here under heavy bonds for the April term of the grand jury.

The death of that faithful animal "Old Harry" the patrol horse was the cause of universal regret among not only the officers but the general public.

It brings to our mind that with the numerous long runs oftentimes to be repeated on the same night, that something more modern and able to get there more promptly is needed and I recommend the purchase in the near future of a combination ambulance and patrol automobile. This will prolong the building of sub-stations in the outlying districts for some years to come.

The City of Springfield has had an auto-patrol for the past three years and have ordered a higher powered car for the present year with a maximum speed of 40 miles per hour. Their experience with their car has been satisfactory in every way. The cost of such a car fully equipped would be about \$3,000.00 delivered.

The police station should be thoroughly renovated and painted on the inside and the walls retinted and paper renewed.

Respectfully submitted,

FRANK E. BURRELL,

Chief of Police.

# Board of Health

---

January 1, 1909.

To His Honor the Mayor of the City of Quincy:

The Board of Health respectfully submit their annual report for the year 1908.

The organization of the Board was as follows:—

William J. Walsh, Chairman  
Francis Ramon Burke, M. D., Secretary  
Cornelius M. Duggan

The Inspectors of the Board were as follows:—

Edward J. Lennon, Sanitary Inspector  
J. J. Keniley, Inspector of Plumbing  
James F. Allan, Inspector of Meats and Provisions

The appropriations for maintaining the department were as follows:

Collection of Ashes .....	\$2,000.00
Collection of Garbage, (budget \$3,500.00) (add. transfer \$336.74) .....	3,836.74
Sanitary Inspection .....	780.00
Abating Nuisances, Contagious Diseases, and Mis- cellaneous, (balance 1907 appropriation \$144.81) (budget 1908—\$1,500), (special ap- propriation 1908—\$1,500) .....	3,144.81
Clerical .....	520.00

## GARBAGE

The Board desire to call your attention to the absolute necessity of providing additional means for the proper collection of garbage in our city. During the past year we were able to maintain three garbage wagons from June first to September thirtieth; and from October first to May thirty-first we had but two. Owing to the growth of the city in population and the large amount of territory to cover, it is impossible with the appropriation we now have to properly handle the garbage and give such service to the citizens as is absolutely necessary to protect the public health. This city should be covered at least twice a week and this cannot be done with the small force now employed in this department. When the distance covered in collecting the garbage at Houghs Neck and Atlantic and the rest of the outlying districts is considered it is easily seen that we cannot do the work as it should be done with an appropriation of \$3,500.

This winter owing to the large number of residents at Houghs Neck, we have been compelled to send a team to that section for the garbage. This has never been done before during the winter months. We realize that complaint has arisen, especially in the summer months, from the overloading of our wagons and exposing the garbage to view, but this cannot be avoided unless additional means for collection are provided. We have often been obliged to work the employees of the department overtime and even then only part of the garbage from each family could be removed, and we are constantly receiving complaints, especially from the outlying sections of the city. We believe that the preservation of the Public Health demands better service in this respect and hope that some provision will be made for the same early in the ensuing year.

## ASHES

Considering the small number of complaints we have received this year we believe that the work of collecting the ashes has been carried on in a satisfactory manner. At the

present time we collect the ashes from October first to May thirty-first but it is only a question of a short time when we shall be forced to collect the ashes during the summer months as well. We have been able to improve the sanitary condition of the city by using the ashes collected to fill many places which were formerly very unsanitary and unsightly.

## MILK

This year the Board adopted rules and regulations governing the milk supply in the city. We regret that there has never been any appropriation made for the proper testing of our milk and the enforcing of regulations governing the milk supply.

## NUISANCES

During the past year 200 complaints of nuisances have been received at this office. All were investigated and abated as far as possible, 162 notices to abate having been sent and 72 orders to connect with the public sewer. In addition to this number, requests have been sent to the property owners on several streets where the sewer has been constructed to connect their premises with the sewer. Five hundred and thirty-one cesspools and seven hundred and sixty-one vaults were cleaned by the city scavenger during the year.

## MEDICAL INSPECTION OF SCHOOLS

Number of Inspectors .....	5
Number of Schools Examined .....	12
Number of Pupils Examined .....	225
Number of Pupils Excluded .....	51
Total number of Pupils Enrolled .....	6,290

## BY SCHOOLS

	Examined	Excluded
Adams .....	45	5
Coddington .....	58	2
Cranch .....	20	5
Gridley Bryant .....	19	14
High .....	1	1
John Hancock .....	19	4
Lincoln .....	29	13
Mass. Fields .....	0	0
Quincy .....	0	0
Washington .....	27	0
Willard .....	7	7
Wollaston .....	0	0

## RECOMMENDATIONS

The Board wish to recommend that the care of Brooks and Drains be placed under this department; that the Milk Inspector be under this department; that the City provide a Contagious Hospital and a Tubercular Hospital; and that a Bacteriological Laboratory be established.

## LICENSES GRANTED

The following licenses were granted by the Board in 1908:

Plumbers	
Master .....	23
Journeyman .....	17
Undertakers .....	9
Garbage .....	5
Tallow .....	6

Stables, permits granted to erect .....	22
Stables, permits granted to occupy .....	7
Stables, applications laid on table .....	3
Clam permits granted .....	387

## CONTAGIOUS DISEASES

During the past year the Board has supported and cared for 47 cases of contagious diseases at a cost to the city of \$1,416.15, whereas during the previous year only 26 cases were provided for. At the present time we are supporting six cases of tuberculosis, four at Rutland, one at Tewksbury and one at home, at a total cost of \$29 per week. The cost of caring for tubercular patients alone during the past year has been \$806.01. Our original appropriation of \$1,500 for "Miscellaneous Expenses and Contagious Diseases" was early exhausted and an additional appropriation of \$1,500 was granted. Much of the expense of caring for needy patients was formerly borne by the Poor Department; but since Legislation has made it compulsory for the Board of Health to support and care for the poor patients suffering from "Diseases Dangerous to the Public Health" (tuberculosis now being included) the expenses of this department have rapidly increased. Until the city can provide a Contagious Hospital and a Tuberculosis Hospital the expenses for Contagious Diseases will increase enormously each year.

WILLIAM J. WALSH,  
CORNELIUS M. DUGGAN,  
RAMON R. BURKE, M. D.

---

Quincy, Mass., December 31, 1908.

To the Board of Health,

Gentlemen,

I respectfully submit to your Board the following report as Sanitary Inspector for the year 1908:

Total number of cases of Scarlet Fever and Diph- theria .....	204
Number of Houses disinfected for contagious diseases	168
Number of complaints .....	200
Number of premises inspected by order of the Board of Health .....	415
Locations for stables inspected .....	25

Yours respectfully,

EDWARD J. LENNON,

Sanitary Inspector.

Quincy, Mass., December 31, 1908.

To the Board of Health,

Gentlemen,

As Inspector of Plumbing in the City of Quincy, I have the honor to submit to you my fifteenth annual report for the year ending December 31, 1908:

Number of permits issued .....	538
Work not started .....	29
Work started but not finished .....	49

#### Nature of Buildings Inspected

Dwelling houses .....	340
Beach cottages .....	89
Offices .....	5
Commercial buildings .....	1
School houses .....	1
Halls .....	1
Railroad stations .....	1
Hotels .....	2
Club houses .....	2
Stores .....	9
Factories .....	1
Garage .....	1
Storehouses .....	1
Laundries .....	1
Shops .....	1
Barber shops .....	2
Fire stations .....	2
Old buildings connected with sewer .....	193
New buildings connected with sewer .....	80
Old buildings connected with cesspools .....	83
New buildings connected with cesspools .....	104
Aggregate Estimate Value of Work .....	\$71,880.00

I would recommend that the regulation relative to the proper light and ventilation of water closets in interior rooms and cellars be embodied in the building laws, as well as in the plumbing ordinances. This would obviate the difficulties of prospective builders who have first to apply to the building inspector, so that upon the inspection of plumbing it would save needless changes to conform with the plumbing ordinance. I would suggest that the regulation now enforced by the Board of Health relative to the installation of water closets in buildings where city water is available be embodied in the plumbing ordinances. This would make the present regulation more binding and permanent. In closing I again recommend changes in the present plumbing laws that will not increase the cost of plumbing, but will greatly improve the sanitary conditions of the work.

Respectfully submitted,

J. J. KENILEY,

Inspector of Plumbing.

Quincy, Mass., January 1, 1909.

To the Board of Health,

City of Quincy.

Gentlemen,

I herewith tender you my annual report for the year ending December 31, 1908.

Number of new licenses granted .....	44
Number of licenses reissued .....	41
Number of inspections .....	349
Number of seizures made .....	10
Number of swine carcasses inspected .....	8

Number of pounds Veal seized .....	40
Number of pounds Poultry seized .....	22
Number of pounds Beef seized .....	52
Number of pounds Venison seized .....	25
Number of pounds Lamb seized .....	9
Number of Bananas seized .....	116

I wish here to thank the Board for their courtesy during the year, and also the Police Department for their help in respect to Hawkers and Pedlers.

Yours truly,

JAMES F. ALLAN,

Inspector of Meats & Provisions.

## REPORT OF THE BOARD OF EXAMINERS FOR THE LICENSING OF PLUMBERS

February 2, 1909.

Board of Health,

City of Quincy.

Dear Sirs,

I am pleased to submit the following report:

During the year the Board of Examiners held two examinations and have issued to journeymen plumbers four licenses and to master plumbers one license.

Respectfully submitted,

WILLIAM A. BRADFORD,

Secretary of Examining Board.

# Report of City Engineer

---

To His Honor, the Mayor of the City of Quincy:

In compliance with the City Ordinance I respectfully submit the ninth annual report of the Engineering Department for the year ending December 31, 1908.

The annual appropriation has been expended as follows:

Appropriation .....		\$2,000
Pay Rolls .....	\$1,718.07	
Miscellaneous .....	106.75	
Office Supplies .....	174.49	
Balance .....	.69	
		<hr/>
		\$2,000

During the past year work has been done for nearly every department of the City.

For the City Council, or Council Committees, ten street plans have been made and estimates furnished.

But one street has been accepted—Nightingale avenue from Intervale street to Roberts street, 923 feet in length and 36 feet wide.

## HIGHWAYS

Lines and grades have been given for the construction of all streets built or regraded during the year, and in addition 15 street lines and grades have been given for the construction of sidewalks and gutters.

Profiles were taken and grades fixed for the double tracking of Hancock street from School street to Quincy Square.

Street lines and grades have been furnished on accepted streets in 31 instances at the request of property owners.

Lines and grades have been given for edgestones as follows:

New Edgestones, 1950 feet straight.

New Edgestones, 836.5 feet curved.

Edgestones relaid, 64 feet straight.

A careful study of the surface drainage problem is being made by this department that all drains built in the future may be a permanent improvement.

Plans and estimates have been made, and lines and grades given for 9,625 feet or 1 82-100 miles of surface drain constructed during the year.

## PUBLIC BUILDINGS AND GROUNDS

Lines and grades were given for the erection of the New Coddington School and grading the grounds and also for the grading of the Quincy School lot at Atlantic.

## SEWERS

The engineering required for the construction of 19,269 feet or 3 649-1000 miles of sewers built during the year has been furnished by this department.

Record and Assessment plans for this work have been completed and filed with the Sewer Department.

## ASSESSORS PLANS

A small balance remains on the special appropriation for Assessors plans of Ward Four. Much of the field work has been done but the plans are as yet incomplete.

It is the intention of this department to complete a portion of these plans before May 1st, 1909 for use of the Assessors.

An effort has been made to keep the completed Assessors' plans up-to-date in regard to transfers of property and location of new buildings but at the close of the year we were somewhat delinquent in this work.

## WATER DEPARTMENT

Lines and location for water extensions have been given by this department when requested and all new work has been measured and gates located.

## HOUSE NUMBERING

House numbers have been assigned to all houses where requests have been made for the same.

But few new plans have been made this year.

## LAW DEPARTMENT

This department has furnished such plans and data as has been requested by the City Solicitor on case before his department including the solution of the grade crossing problem at Water street and Savil street.

The Engineer for the City, Professor Charles B. Breed, has appeared for and ably represented the City before the special Commission appointed to determine the solution of this problem.

Although nominally in charge of the City Engineer's Office for the year, Mr. Ezekiel C. Sargent has practically carried on the work and I wish to thank him for his hearty co-operation and active interest shown in all the work.

Respectfully submitted,

RANDOLPH BAINBRIDGE,

Acting City Engineer.

# Report of the City Clerk

---

To His Honor, the Mayor of the City of Quincy:

I herewith submit the twentieth annual report of this office, being for the year ending December 31, 1908.

## Receipts

Amusement licenses .....	\$417.00
Auctioneers' licenses .....	14.00
Pool and Bowling Alley licenses .....	96.00
Junk licenses .....	190.00
Other business licenses .....	78.00
Recording mortgages, etc. ....	157.00
Copying records .....	41.50
Other receipts .....	25.99
Marriage licenses .....	275.50
Dog license fees .....	204.80

---

Total	\$1,499.79
-------	------------

The above sum has been paid to the City Treasurer.

Number of marriage intentions recorded in 1908 .....	301
Number of marriages recorded in 1908 .....	326
Number of births recorded in 1908 .....	914
Number of deaths recorded in 1908 .....	455

The number of dogs licensed in 1908 was 898 male and spayed, 123 females, 3 kennels, for which the sum of \$2,486.00 was received. Of this amount \$2,281.20 was paid to the County Treasurer, the remainder being included in the above account of receipts, as dog license fees.

Annexed are lists of births, marriages and deaths recorded in Quincy in 1908, and the election returns for 1908.

Respectfully yours,

HARRISON A. KEITH,

City Clerk.

# Fire Department

---

Quincy, Mass., January 20, 1909.

To His Honor, the Mayor,

In compliance with the requirements of the City Ordinance, I hereby present my twelfth annual report for the year ending, December 31, 1908, containing a statement of all fires and alarms for the year, the loss and insurance on the same as far as could be ascertained, the list of the permanent force of the department and their ages, also a schedule of the property under their charge.

## ORGANIZATION

The force consists of one chief, and three assistant engineers, eighteen permanent and sixty-three call men. Combination No. 1 at Central Fire Station has two permanent and eight call men; Combination Hook & Ladder No 1 has one permanent and eight call men; Combination Hook & Ladder No. 2 has two permanent and seven call men; Hose No. 2 has one permanent and five call men; Hook & Ladder No. 3 has two permanent and seven call men; Hose No. 3 has one permanent and six call men; Hose No. 4 has two permanent and six call men; Hose No. 5 has one permanent and nine call men; Combination No. 2 has two permanent and seven call men.

## OFFICERS

Frank C. Packard, First Assistant Chief.

Daniel J. Nyhan, Second Assistant Chief.

James P. Dillon, Third Assistant Chief.

## APPARATUS

The apparatus of the department consists of one steam fire engine in very poor condition; three combination chemical engines and hose wagons; two combination ladder trucks; one straight hook and ladder truck; five hose wagons; one fire-alarm wagon, and three spare wagons; one chemical engine; one hand engine not in service and five pungs.

## HOSE

We have in the service 13,000 feet of cotton hose rubber lined, (9,000 feet in good condition, 3,000 feet in fair condition 1,000 feet in poor condition). I believe the department should be kept well supplied with hose in case of emergency. The life of hose is two years, after that it is liable to burst when heavy pressure is put on. I will call the attention of the Council to placing more hydrants on old line of pipes, as it will give better fire protection, also saving the city a great deal of money in using shorter lines of hose.

## FIRE ALARM

The fire alarm service has been increased the past year by placing three boxes on the circuit. There are ninety fire-alarm boxes in service. This branch of the service needs the greatest attention so when boxes are pulled, they will work promptly.

## ELECTRICAL APPLIANCE

Two hundred and fifty-four cells of battery, one six-circuit repeater, one Gamewell switch, six circuit switches, one ground-test switch board, one brake key, one mill, amp. meter, six galvanized meters, one quartered-oak switch board, one bolt meter, six Rogers propectors, one amp. meter, six resistance coils, one circuit braker, six double throw switches, twelve lamps on switch board, six test jars, one-half horse power motor for charging batteries, one rheostat, three switches, three automatic whistles, five Gamewell tower strikers, 1-18 inch gong. Frank C. Packard has two six inch gongs. Daniel J. Nyhan has one six inch gong. Hose no. 2 has one twelve inch gong; Hose no. 3 has one twelve inch gong; Hose no. 4 has one eighteen inch gong; Atlantic combination has one twelve inch gong; Houghs Neck has one eighteen inch gong; Wollaston Foundry has one six inch gong; Tubular Rivet & Stud Co. has one twelve inch gong; Old Colony St. Ry. & Power House has one twelve inch gong; Captain Hayden has one six inch gong. Charles Martin has one six inch gong. Two extra gongs at Central Fire Station; Quincy Electric Light & Power Co. has one twelve inch gong. Chief Williams has one six inch gong.

## HORSES

The number of horses in the department is twenty-four, which are in good condition, excepting three which will have to be replaced on account of their ages and poor condition. Their ages run from six to twenty-three years.

## RECOMMENDATIONS

I would also recommend the purchasing of three new horses the coming year. The purchasing of a new steamer and remodeling the old steamer, which is in service today, my reasons for this are that as we are a wooden city, there is great danger of a large fire starting here at most any

time and without more power than our hydrant service, it would be impossible to stop any large fire, as my experience in the fire business, the past thirty-five years teaches me that we can not stop a large conflagration, unless we have the machinery to do the work.

In closing this report, I wish to tender my sincere thanks to His Honor, Mayor Shea for his interest in the welfare of the department; to the Council for all favors rendered during the year; to the City Auditor and Treasurer for all favors rendered; to the Chief of Police and officers for the manner they performed their duties at fires; to the Committee on Fire Department for the interest they have manifested in the business of the department; to my associates of the Board of Engineers and to the officers and members for the prompt and efficient manner in which they discharged their duties, thereby maintaining the reputation of the department for efficiency.

## FIRES AND ALARMS 1908

During the year beginning January 1st and ending December 31st, 1908, there were 241 alarms, (91 bell and 150 still alarms).

Value on property at risk .....	\$384,860.65
Insurance on property at risk .....	196,250.00
Loss on property .....	23,871.27

Respectfully submitted,

P. J. WILLIAMS,

Chief Engineer, Quincy Fire Department.

# Report of the Commissioner of Public Works

---

To His Honor, the Mayor of the City of Quincy:

Sir:

In compliance with your request I herewith submit the nineteenth annual report of the Department of Public Works for the year ending December 31, 1908.

The work of this department may best be divided as follows, viz:

## FIRST—HIGHWAY DIVISION

Which includes the care and repair of existing public streets, the construction of new streets, the care, repair and construction of catch basins and drains, care and repair of certain bridges and all the natural drains with appurtenant culverts and waterways, lighting of streets and inspection of pole locations, watering of streets, removal of snow, setting of curbing, the construction of new buildings, the maintenance of City Hall, repair and care of other public buildings, the suppression of the Gypsy and Brown Tail Moth, issuing of permits and other work incidental to construction is done from this division.

## SECOND—WATER DIVISION

Which includes the care and repair of the existing distributing system of mains and hydrants and services, the laying out and construction of extensions to the system, the laying of new services, the reading, testing, repair and installation of water meters and the recording, billing and committing of water rates.

## THIRD—SEWER DIVISION

The construction of new sewers, the maintenance of existing sewers, the making of house connections or particular sewers and the making of the proper assessments for the same comprise the work of this department.

There were thirty-four orders passed by the City Council for work to be done under the direction of the Commissioner of Public Works authorizing the expenditure of \$216,683.55 including transfers and receipts, which may be divided as follows:

Street construction and drainage .....	\$19,453.52
Surface drainage .....	5,166.00
Public Buildings, construction and repairs .....	27,310.00
Gypsy Moths .....	6,661.81
Street Lighting .....	550.00
Water construction and receipts .....	30,532.22
Meter Installation .....	7,000.00
Sewer construction, main and particular .....	36,000.00
Annual Budget .....	84,010.00

The balance of thirty-four orders related to pole locations, street lights, car tracks, accepting of streets, suppression of Gypsy and Brown Tail Moths and preparing of polling places.

In the expenditure of specific appropriations the aim has been to expend the money where designated in the order and to do the amount of work contemplated in the estimate of the same.

In the expenditure of the money appropriated in the Annual Budget for the maintenance of highways and other city property I have tried to draw the lines in such a manner that a portion of it might go into permanent work.

Of course the actual amount accomplished in this direction has not been as large as I have wished but at the same time the aim has been to remedy the defect and also remove the cause at the same time, that is, instead of filling a washout after every storm try and stop it from washing out.

Under the various divisions of the work will be found tables for reference and record of the existing permanent work in the city and also a schedule showing data regarding our accepted streets. This latter table I am having printed separately as we have constant queries regarding them and there are no lists in the office.

The following tables show balances from 1907, appropriations of 1908, expenditures and balances and following that a summary of the work done under the various appropriations.

#### ANNUAL BUDGET

	Appropriation	Expended	Balance

## LATE 1907 APPROPRIATIONS

The following appropriations were passed by the City Council late in the year 1907 and were completed during the year 1908:

	Appropriation	Expended	Balance
Bradford street .....	\$600.00	\$600.00	.....
Coddington school building	70,000.00	61,904.59	\$8,095.41
Common street .....	1,500.00	1,500.00	.....
Cottage avenue Balance '07	41.00	41.00	.....
Crescent street .....	1,700.00	1,700.00	.....
Cross street .....	1,000.00	1,000.00	.....
Cushing street .....	500.00	500.00	.....
Eliot street .....	500.00	500.00	.....
Farrington street .....	2,000.00	346.53	1,653.47
Farrington street drain Balance 1907 .....	155.14	155.14	.....
Glendale road .....	2,500.00	2,500.00	.....
Glover avenue .....	1,650.00	1,650.00	.....
Hunt street .....	1,800.00	1,800.00	.....
Liberty street .....	1,500.00	1,500.00	.....
Robertson street .....	900.00	900.00	.....
Sumner street .....	3,000.00	3,000.00	.....
Ward Six School Furnishings Balance 1907 ...	93.43	2.40	91.03
Wayland street .....	500.00	500.00	.....
Whitwell street sidewalk Balance 1907 .....	583.10	489.62	93.49

## BRIDGES, CULVERTS AND DRAINS

The annual appropriation for this work was smaller than usual although the work usually done by the Board of Health in the cleaning of natural waterways was transferred to this department.

The work consists primarily in the maintenance of the bridges in which the City is financially interested, the repair and care of culverts, catch basins and drains, cleaning of brooks and ditches and the construction of new permanent work to protect the highways and property.

TABLE OF BRIDGES MAINTAINED IN WHOLE OR IN PART BY THE CITY.

	When built	Construc- tion	Roadway	Length	Width	Roadway	Sidewalk	Proportion paid by city
Atlantic . . . . .	1906	Steel	Plank	120	64	22	7.5	25 per cent.
Bates Avenue .	1887	Steel	Plank	65	33	22.5	5.5	All
Bates Avenue .	1887	Wood	Plank	18	33	24	5.5	All
Beale Street ..	1853	Wood	Plank	33	35	30	5	All
*Fore River ..	1903	Steel	Plank	663	36.75	31	5.75	33 per cent.
*Hingham ....		Pile	Plank	430	26	26	0	5-24
*Neponset ....	1889	Pile	Plank	620	40	33	7	All
Warren Avenue	1900	Steel	Plank	182.5	10		10	All

\*Drawbridge

All of these bridges have had repairs during the year. The Atlantic bridge was entirely replanked with hard pine. By the decree of the Commissioners the maintenance of this bridge is borne by the three parties at interest as follows: New York, New Haven and Hartford Railroad, sixty per cent., City of Quincy, twenty-five per cent., Old Colony Street Railway Company, fifteen per cent.

I do not think the bridge will need painting during the coming year so there should be no expense connected therewith. The Fore River Bridge has been partially replanked and will need a little more the coming year.

The fender piers will need extensive repairs and also new construction at an early date as they are inadequate for the purpose.

The fender on the westerly end needs to be entirely rebuilt and large fender dolphins driven. Twice during the year this end of the bridge has been damaged by vessels and this work should be done in the early spring.

The draw fender pier should at least be strengthened at the ends and fender dolphins driven. The bridge needs painting. The city pays 33 per cent. of the up keep of this bridge.

Both the bridges on Bates avenue will have to be replanked next year.

The Beale street bridge looks disreputable but nothing has been done outside of keeping it safe on account of the proposed four tracking of the railroad.

As there are no records of the location, sizes or character of many of our old drains I am trying to gather such information, which at times is very valuable, and tabulate it.

The right to operate and maintain drains of any kind through private land is a valuable one as such drains usually follow the natural waterways and to lose such a right means greatly additional cost in disposing of surface water.

Several of these rights have been reclaimed during the year and there are others which must be on record until improved or the right of way will be lost especially in the case of drainage ditches which abutters are filling up.

The usual spring cleaning of brooks was done at considerable expense, the bulk of which was wasted in removing from the brooks debris which had been thrown in.

For drains and catch basins built during 1908 see Surface Drainage.

## REMOVAL OF SNOW

The actual removal of snow during the year has not been an expensive matter but as almost every storm has ended in a thaw and then frozen it has been necessary to do a great deal of sanding.

This work radiates from the railroad stations through the main thoroughfares and then into the lesser ones.

There are thirty-nine snow plough routes, sixteen of which are covered by the city teams and twenty-three by private teams.

To do it early and do it consistently has been the object.

I would respectfully suggest that an order be passed requiring store keepers in the centre to remove all the snow from their sidewalks within a specified time, as is done in other cities.

## STREET WATERING

The streets ordered by the City Council have been watered from April 15th to October 15th continuously and after that date when absolutely necessary.

10.71 miles of street having car tracks were watered by the electric car sprinkler at a cost of \$3,300.

As a rule these are wide streets so that the actual mileage is almost double the above amount.

With a competent man to handle the car more watering can be done for the same cost than with the horse carts.

11.6 miles of narrower streets were watered by five regular teams at \$90 per month and one city team at certain times.

More streets were watered for the same amount than in 1907 so that the assessment was slightly reduced being \$.02 per linear foot.

Total assessment of \$3,644.18 was levied on 182,209 linear feet and the same committed to the Assessors.

As usual there have been complaints on account of dust from abutters and from contractors on account of the small pay for the work.

On a dry windy day the street is dusty for twenty hours out of the twenty-four and for a portion of the rest of the day there is liable to be mud. It has been said that "The most common and the most costly way to prevent dust and to preserve roads is to sprinkle them with water." In addition to the \$7,000 appropriated for this work there must be added the cost of 26,000,000 gallons of water, the maintenance of stand pipes and the extra cost of street maintenance due to the damage by the water.

These difficulties may be overcome at about the same cost and with much better results by several new processes of treating the road surface and I would suggest that during the coming year the city obtain an act enabling them to do this work and assess a portion of the cost on the abutters as is done under the present street watering act.

## STREET LIGHTING

At the present time we have installed the following street lights: 168 arc lights, 748 incandescent lights and 102 gas lights.

The Council made an extra appropriation during the year for street lights at Houghs Neck and under this order 71 gas lights and 19 incandescent lights were installed.

The gas lamps are hand trimmed and lighted, which is a great improvement over the clock system.

The electric lights have the new tungsten lamp and radial shade and this combination gives at least twenty-five per cent. more light.

The Company is installing these lamps all over the city with good results.

Houghs Neck is now well lighted and the lights have also been a direct benefit in several ways.

The lighting contract expires June 30, 1909 and I would

suggest that some arrangement be made at that time whereby some of our main streets be lighted all night.

## REPAIR AND CARE OF PUBLIC BUILDINGS

The amounts expended under this appropriation are tabulated below.

It will be seen that the cost of running City Hall is almost one half of the total appropriation leaving an average of about one hundred and fifty dollars for each of the other public buildings.

A portion of this amount has to be expended each year for the natural wear and tear especially of heating and plumbing apparatus and in the hose houses for stalls and floors.

In many of the buildings the flimsy methods of house construction have been too closely followed which means that things are giving out continually so that I have been able to do very little new work.

The new cells in the Houghs Neck Hose House and the new stall at the Ward Four Hose House took most of the available surplus from the maintenance.

The new boiler laws as amended by Chapter 563, Acts of 1908, required new safety plugs, gauge fittings in all our boilers and in some cases new safety valves and connections to boilers.

Several boilers will have to be retubed in 1909 which will cost about four hundred dollars.

The annual boiler inspection costs about one hundred dollars.

At the High School the State Police required new locks and bolts on all exit doors in the hall and fire exits, balcony and stage exit doors cut out and widened, all the exit signs enlarged and new system of wiring installed, a railing put around the balcony, fire extinguishers installed, stair rails provided and other work before a license was given for the hall.

A special appropriation was made by the Council for changing outside doors to open outward and provide proper

locks and bolts, put fire escapes on the Willard School and make other changes necessary for the safety of pupils in case of fire. This was money well spent although we have practically nothing new to show for it.

The special appropriation for the Atlantic Hose House has put that building in good repair inside and out and made several improvements.

The cellar of the Ward Four Hose House has been dug out and concreted under the appropriation therefor and the drainage from the stalls which used to dump into the rear part of the building now enters the sewer.

### ADDITIONS TO THE LINCOLN SCHOOL

It is expected that work on this building will begin early in the coming year as all the preliminary work is practically completed at the present time.

The additions consist of four class rooms, two on each end of the building on the front.

### CODDINGTON SCHOOL

Work was begun March 26, 1908 and the building is completed excepting for a few minor details.

### EXPENDITURES ON PUBLIC BUILDINGS

## HIGHWAYS

This is an important part of the work of this department and an increasing one, but from the city reports of past years I judge as the streets grow longer the appropriation grows smaller.

## Maintenance

There are 77.6 miles of accepted streets of various widths, the lengths of various kinds of road surface being as follows:

	Miles
Paved .....	1.79
Paved and macadam .....	3.82
Macadam .....	13.20
Gravel and earth .....	58.79

Fully one half of the budget appropriation for maintenance of highways is used to clean streets, gutters, catch basins, drains, cut brush, weeds, do small patching, repairing, paving, fixing sidewalks and other incidental work. I have tried to squeeze out of the other half as much semi permanent work as possible so that the same ground will not have to be gone over every year.

The budget appropriation for street maintenance gives an average amount of \$270 per mile for this purpose which is very small indeed for city streets especially where we have such heavy traffic.

The cost for this item on the narrow state roads is equal to this amount after the roads have been carefully built in the first place whereas many of our streets have no good wrought surface. The addition of sidewalks to a road adds very materially to the cost of maintenance as the sidewalk prevents the water from running off the side of the road and so provision must be made for taking care of it.

Standing water soon ruins a street surface and in our clayey soil the ground water has the same effect. A certain amount of permanent work to prevent this should be done under the maintenance appropriation and if this is done it means that many of our outlying streets receive no attention beyond the spring and fall cleaning.

Quincy has little good road building material although some of our neighboring towns have plenty of good gravel which makes a good road for light travel. The gravel in the city pit is not fit to put on any street and the gravel in the north end of the city is fast giving out.

The city crusher on South street turns out a very fair quality of stone at a reasonable price and has been worked continuously this season.

The crushed stone cost 71 cents per ton on the teams but the long haul to certain parts of the city nearly doubles this amount for stone delivered on the street.

There are thousands of tons of granite ready for crushing in South and West Quincy which could be put on the teams for one-fifth of the cost of our ledge stone. The No. 1 stone could be used for street work and the finer stone and dust is just what is needed in the city to build good dry sidewalks instead of those now built of our poor gravel, sand and clay.

For this reason I hope we may have a portable crusher during the coming year, it will give us very profitable work for men and teams during the winter, save its cost in two seasons of street construction, enable us to use crushed stone to build good sidewalks and clean up the stone heaps in various parts of the town which are a nuisance to the granite men and unsightly as well.

A piece of test roadway should be built entirely of granite and bound with some bitulithic or asphaltic binder strong enough to keep the granite stones from grinding on each other and if this is a complete success, as I think it will be, many thousands of dollars may be saved in future road construction by the use of crushed granite.

## REPAIR WORK

The first aim has been to put our main highways in proper condition and for this purpose 5,470 tons of crushed stone have been used not including that used for special work.

4,500 tons of this was used for permanent work including Adams street (three places) Washington street, South street, East Howard street, Beale street and Hancock street, making 2.7 miles in all.

Portions of Adams street, Hancock street, Independence avenue, Franklin street, South street, South Walnut street, Elm street, Elm avenue have been picked up, shaped and given a light coating of stone making 1.8 miles in all.

In many of these streets the puddles had been filled so many times to get rid of them instead of trimming the gutters that the street was entirely out of shape so that the principal cost lay in shaping them.

It is just as important to have the proper crown on a street as it is to have a pitch to a roof of a house. In this connection I might add that it is a waste of money to try and keep in first class repair Hancock street (west side) School street (from Hancock street to Franklin street) Franklin street (from School street to Water street) with macadam until such time as they have a permanent pavement.

I would recommend simply the constant patching of bad spots with stone so as to keep a passable road.

1.3 miles of gravel roads had minor repairs made upon them.

9 Cross walks were built out of maintenance appropriation as the usual appropriation for this was not forthcoming.

1,083 linear feet of drain were laid.

15 Catch basins and manholes were built.

1,477 linear feet of curbing was set.

480 square yards paving relaid.

Sidewalks in various parts of the city have received attention but this work has not been of as permanent a nature as I wish it had been.

## RECOMMENDATIONS

Buy portable crusher.

Build 1,000 feet of permanent tar or granolithic sidewalks each year in each Ward.

Build 1,500 feet of permanent cinder and stone walks in each Ward each year.

Pave portion of Hancock street each year.

Pave one side of School street from Hancock street to Franklin street in 1909.

Build a section of bitulithic macadam.

Fix Granite street and provide drainage under Granite street bridge.

Cut hump on Newport avenue and use stone for building the street.

Build Farrington street after track has been changed to centre of street.

Build portion of Squantum Causeway.

Fix Quincy avenue if the Massachusetts Highway Commission will not.

Provide surface drainage.

## HIGHWAY CONSTRUCTION

The accompanying table gives the detail of this work. A few of these streets are not quite finished but this can easily be done in the early spring.

As most of the estimates called for gravel streets and no provision was made for drains, catch basins, curbing or borders, it was necessary in a few instances to leave out some of the necessary drains although those put in are amply large enough to allow for future extension.

The great handicap in this work is the lack of competent foreman, men who understand the work and can carry it on profitably.

Ten to twenty-five per cent. is wasted on some work for this reason.

Two short visits a day to a job is all that can be given so that the balance of the time a competent foreman should

carry out instructions if the work is to be done profitably and in a workmanlike manner.

The maintenance of the city stables, horses, teams, harnesses and pay of day and night men amounted to \$6,475.09, the value of the services received therefrom amounted to \$7,510, added to this is the fact that a city team does more work than a hired team, adds at least some respectability to the department, are at hand any minute, day or night, furnish employment for two night men and also provides a store house which we would have to have under any system.

## EDGESTONES

Under the budget appropriation the following edgestone was set and assessment made:

George W. Morton .....	Spear Street
Parish of Saint Chrysostom .....	Hancock Street
John H. Gillis .....	Pleasant Street
Wilford C. Hunt .....	Bigelow Street and Miller Stile Road.

The above work consisted in furnishing and setting 529.4 feet straight, 33.4 feet curved edgestone and 3 block corners.

In the street construction a small amount of edgestone was set on the following streets: Hunt street, Glover avenue, Wayland street, Newport avenue, Cushing street, Liberty street, Eliot street, Bradford street and Crescent street.

The aggregate amount being 827.6 feet straight, 792.1 feet curved edgestone and 5 block corners.

## GYPSY AND BROWN TAIL MOTHS

This work is carried on by the City under the supervision of the Gypsy Moth Commission.

Notices are sent to all property owners requesting them to do the work before a certain date and if the work is not done the City does it and charges the same to the owners.

Highway trees should be kept very clean as the caterpillars are carried very easily by passing vehicles to other districts. These trees have received careful attention and considerable pruning of limbs and dead branches has been done.

Most of our trees need lots of pruning to open them up and prolong their lives as they have small chance for nourishment when growing along the street. Linemen working on the wires have mutilated lots of trees about the City and to try and remedy some of this damage the three companies operating here have each sent a gang of men, under our supervision, about the city.

The elm leaf beetle did lots of damage last summer and if this continues the trees will die.

Power spraying is the best and cheapest method to fight this pest and should be done in the early spring in connection with the Gypsy Moth work.

## SURFACE DRAINAGE

Quincy is well provided with brooks to carry off surface water and the problem is to carry the water to the brooks in the best and cheapest manner. There are few large areas but what have a natural outlet and this was especially true before streets were built and houses and lawns made. These alter or spoil the natural drainage in almost every case.

In many cases natural waterways are filled in and the immediate complaint is made that water from city streets is flooding the land. This is seldom true but on the other hand grading a street usually brings more water and brings it more quickly to the low points and for this reason the city must co-operate with the owners in disposing of it.

It is a problem which comes to every thickly settled community and should be met in a comprehensive manner as all temporary makeshifts will have to be dug up and done over again.

There are however some areas which should not be built upon until drained. The holding and maintaining of natural drainage rights is valuable to the City and for that reason they should all be located and plotted.

A study is being made for surface drainage but it is far from finished at the present time.

Work of this nature is rather expensive but is good for half a century if properly done and for these reasons should be properly designed.

No large main drains have been laid this year but those laid are large enough to provide for future extension.

The work was done under four appropriations, viz:

1st. Surface drainage.

2nd. Bridges, culverts and drains.

3rd. Highway maintenance.

4th. Special street construction and is given in detail below:

### SURFACE DRAINAGE

## SEWER DIVISION

The following is a report of the work done by the Sewer Division for the year 1908. We began the year with a balance of \$15,118.66 and on May 4th 1908 the City Council made an appropriation of \$30,000 for the extension of the system. The work of construction was begun in April and carried on throughout the season by two separate construction forces. The entire season's work was performed by day labor, thus affording the citizens employment in this last year of depression.

The sewers built during the year have been fairly well distributed over the different sections of the city and were constructed mainly at the suggestion and recommendation of the Board of Health. All others were built upon the petition of abutting property owners.

The construction of the sewer in Farrington Street and other streets in that vicinity, a section of the city that was in a deplorable sanitary condition, was the first work attempted. Some little difficulty was encountered here by the large amount of water to take care of but after the first two weeks the work progressed rapidly and as soon as the sewer was completed all the houses on the line were immediately connected. All the other sewers were carried to completion without experiencing any greater difficulties than were anticipated. The following table gives a summary of the work done the past year showing location, length, and sizes.

Street	From	To	Length	Size
Arnold Street	Murdock Avenue	near Washington Street	372.08	8 inch
Arthur Avenue	Arthur Street	165 feet northerly	165.00	8 inch
Beacon Street	Glendale Road	550 feet northerly	550.00	8 inch
Bent Place	Quincy Point Main	190 feet westerly	190.00	8 inch
Broadway	Farrington Street	Newport Avenue	622.50	10-15 inch
Brooks Street	Billings Road	300 feet northerly	300.00	8 inch
Bryant Place	Nightingale Avenue	263 feet westerly	263.00	8 inch
Chubbuck Street	Watson Terrace	Claremont Avenue	622.50	8 inch
Claremont Avenue	Chubbuck Street	319.5 feet southerly	319.50	8 inch
Copeland Street	Furnace Avenue	Willard Street	1,019.33	8 inch
Dysart St. and Glencoe Pl.	Elm Street	Seammell Street	1,496.90	10 inch

Hobart Street	Farrington Street	Fayette Street	239.30	15 inch
Hobart Street	Farrington Street	Taylor Street	480.00	8 inch
Hancock Street	Willett Street	near Billings Road	2,603.65	8-10-12 inch
Hamilton Street	Hamden Circle	149.3 feet westerly	149.30	8 inch
Kemper Street	Elm Avenue	500 feet southerly	500.00	8 inch

Lawrence Avenue	Chubbuck Street	near South Street	573.00	8 inch
Main Street	Station 1 plus 30	570 feet southerly	570.00	8 inch
Maple Street			23.70	8 inch
Marlboro Street	Elm Avenue	720 feet southerly	720.00	8 inch
Murdock Avenue	North Street	Arnold Street	628.15	8 inch
Newport Avenue	Broadway	450 feet northerly	450.00	8 inch
Oxenbridge Road	Tyler Street	98 feet southerly	98.00	8 inch
Phillips Street	Elm Avenue	300 feet southerly	300.00	8 inch
Pleasant Street	School Street	Quincy Street	575.95	8 inch
Safford Street	Wilson Avenue	400 feet northerly	400.00	8 inch
Safford Street	Hobart Street	275.6 feet southerly	275.60	8 inch
Taylor Street	50 feet no. of Hobart St.	326.6 feet southerly	326.60	8 inch
Thayer Street	Alleyne Street	250 feet northeasterly	250.00	8 inch
West Elm Avenue	Staunton Street	Gould Street	338.08	8 inch
Wilson Avenue	Fayette Street	Safford Street	480.27	8 inch
	Total 19,268.69 feet or 3.649 miles of sewers built in 1908			

## PARTICULAR SEWERS

Two hundred and ninety-nine connections have been made with the public sewer at an average cost of \$0.451 per foot or \$20.53 per connection. The average length per connection was 45.489 feet. The total length of pipe laid for these connections was 13,601.30 feet making to date a total of 124,366.71 feet or 23.53 miles.

The fact that whole streets of houses were ordered by the Board of Health to be connected with the sewer and were put in one after another is in part responsible for the low cost of these connections.

There were six stoppages in the house connections during the year.

The money for the construction of particular sewers is exhausted and an early appropriation is requested to carry on the work the coming year. We have already several applications on hand.

Below will be found various tables in relation to particular sewers:

## By Wards

## Maintenance

This appropriation is made for the purpose of taking care of the running expenses of the office and care, repair and cleaning of the sewers. It is mainly spent for the latter work but it is insufficient to do the work in a thorough manner.

When the Sewerage Commissioners turned over 23 miles of sewer to the control of the Commissioner of Public Works several years ago he was given an appropriation of \$1,500 to care for the same. Today we have a total of 52.253 miles and the same amount of money to maintain them. I think, if due consideration could be given the matter the Council would see the necessity of increasing the appropriation that the work may be done properly. The flushing has been carried on at intervals during the spring and summer and the cleaning and scraping during the cold weather.

## Assessments

The work of making assessments has been completed and a total of \$20,940.71 has been assessed on abutting property owners for the construction of the sewers of 1908.

There are several petitions on file in this office for the extension of the Sewerage System and we have also received letters from the Board of Health recommending that the sewers be extended in various parts of the city. An estimate for the construction of these sewers will be made up and presented to the City Council for their consideration. It is urgent that the appropriation be made early in order that the work may be carried to completion before the cold weather sets in.

## WATER DIVISION

The work of this department may be divided as follows: Financial, Construction and Maintenance.

### Financial

There is considerable comment on the amount charged for water in Quincy and the usual remark accompanying it is "the water department is not on a paying basis." To show the water taker what he is paying for and to refute the second statement I should like to submit the following data which resolves itself into the question of water rates. The water taker not only must pay for the actual water used but a proportional share of the cost and maintenance of the system incident to his service.

The difficulty is to divide these charges equitably. Under the present system of fixture charges more than half the water paid for by the city runs to waste which naturally keeps up the water rates.

## WATER RATES

As this is the principal interest the public have in the Water Department and as it is practically a matter of dollars and cents, I think it may best be considered directly from that stand-point as follows:

Income		Expenditures	
(1)	Water rates	(3)	Bond Payment
(2)	From Tax levy	(4)	Interest Payment
		(5)	Metropolitan Assessment

As item 1 and 2 are dependent entirely on items 3, 4, 5 and 6, I will take up the latter and refer you to the following table which covers the amount of these expenditures for the last ten years and an approximate estimate for the next five years.

Year	Bond Payments	Interest Payments	Metropolitan Assessments	Main- tenance
1899	\$29,500	\$28,735.00	\$4,477.50	\$9,000
1900	30,500	29,907.50	11,271.59	8,600
1901	31,500	29,172.50	22,004.38	10,000
1902	32,500	29,811.13	24,379.11	10,000
1903	34,500	29,087.70	30,237.42	10,000
1904	35,500	28,482.50	34,084.24	11,000
1905	37,500	27,295.00	35,832.50	10,000
1906	39,500	26,722.50	46,314.16	12,000
1907	39,500	26,201.50	50,027.14	12,000
1908	40,500	25,894.50	49,285.01	12,400
1909	42,500	25,385.00	50,000.00	12,000
1910	42,500	25,000.00	*50,000.00	12,000
1911	43,500	25,000.00	*50,000.00	12,000
1912	44,500	25,000.00	*50,000.00	12,000
1913	45,500	25,000.00	*50,000.00	12,000

\*Depends on the consumption of water.

It will be readily seen from this table that items 3, 4 and 6 are practically fixed amounts. As the city grows, items 3 and 4 will remain about the same as appropriations for extensions of mains will have to be made for a great many years.

The cost of maintenance need not be increased for several years although after our meters increase in age the up keep will be more than at present.

As 3, 4 and 6 are practically fixed, item 5 will determine the amount of money to be raised each year in the future to meet the expenses of the department.

### Metropolitan Assessment

This assessment has grown from about Five Thousand Dollars in 1899 to Fifty Thousand Dollars in 1907 and will continue to grow unless the people stop wasting water. The Metropolitan Water and Sewerage Board have spent over Forty Millions of dollars in providing the district with pure water, and have asked for about another Million this year and if the consumption of water cannot be brought down to a reasonable amount it will be necessary to spend additional sums for extensions and maintenance. By the Acts of 1905, Chapter 457, each city and town in the Metropolitan Water District must pay its proportioned share of the total sinking fund, interest and maintenance costs of the district.

One third of our assessment or about Seventeen Thousand Dollars is based on our valuation, which cannot be reduced, two thirds or about Thirty-three Thousand Dollars is based on the consumption, which should be reduced one half. Other cities have done this and Quincy should.

### METHOD FOR WATER CHARGES

Having fixed on the amount of money to be raised, the next question is how to assess it equitably. Let this be divided as follows:

Total water rates to be divided between

City	Water takers
Municipal buildings, Drinking fountains	Fixture rates
Construction work, Sewer flushing	Small meter takers
Street watering, Blowing off hydrants	Large meter takers.
Cemetery and Fire protection	

Before fixing the amount the City should pay for the water it uses, it would be well to settle the question as to whether it should pay anything or not.

By the word City I mean taxable property and municipal departments and there is a decided difference between the tax payer and the water taker.

The city as a whole receives the benefit from the water used for various purposes for which it should pay as follows:

Street watering .....	\$2,000
Street construction .....	200
Sewer construction and flushing .....	200
School houses .....	1,500
Public buildings .....	500
Fire protection (735 hydrants) .....	22,050
Flooding ponds, parks and playgrounds .....	100
Water construction .....	200
Nine Fountains .....	400
Cemetery .....	80
Flushing dumps .....	80
Total .....	<hr/> \$27,310

The main item of this amount is for fire protection and I cannot see why the property so protected should not pay for it.

In planning the system of water works fire protection is provided in each locality, not on the basis of water takers but on the property valuation, the more valuable the property

the better fire protection necessary. The above figures are conservative and in most cities the hydrant rental is larger than this either for municipal or private plants.

Assume for the present that the city will pay its proper amount and the balance of the assessment, about One Hundred Thousand Dollars, must be divided between the large meter takers, small meter takers and fixture rates.

The minimum rates to large consumers are practically fixed by the Metropolitan Water and Sewerage Board and as we receive from these rates about Thirty Thousand Dollars it leaves about Seventy Thousand Dollars to be raised among about six thousand small takers. This amount may be divided as follows:

1	Bond Payment .....	\$22,500
2	Interest Payment .....	14,100
3	Metropolitan Assessment .....	26,900
4	Maintenance .....	6,500

Add 1, 2, 4 and one third of 3 and we have practically the average fixed charge, due to cost and maintenance, to be assessed to the small takers or an average of \$8.68 per taker. This is the average amount chargeable to each taker for fixed charges or the minimum rate provided every service was metered. To this would have to be added a charge for the actual amount of water used at the present wholesale rates. The minimum charge could be fixed lower than this, probably at about our present minimum fixture rate, as the excess used by many consumers would offset the reduction.

This would work out as follows:

6,000 takers at \$6.00 .....	\$36,000
450,000,000 gallons used by small takers at \$.12 ...	54,000
<hr/>	
Total .....	\$90,000

This yearly consumption for the small takers of 450,000,000 gallons is based on what the consumption would be if meters were installed on all services. The present consumption is twice this amount. The reason for this is the large number of unmetered services and the sooner these services are metered the sooner the water rates for small consumers can be reduced. The rate to small manufacturers could also be reduced to almost the present wholesale rate.

The wholesale rate cannot be fixed as a flat rate basis per hundred cubic feet and be equitable as may be seen by analyzing the items of expenditures. Three of these items, Bond payment, Interest payment and Maintenance, are dependent on the size or cost of the plant and the size depends more on the number of takers than on the amount of water used. As two thirds of the Metropolitan assessment is based on consumption, this can properly be divided per gallon consumed or at about four and one half cents per 1,000 gallons. Add to this the cost of distribution, which will be found to be from one cent to seven cents per thousand gallons, depending on the quantity used and then add to this the minimum charge per service as figured above which can be found from the frontage of the property and it will be found that the City makes some profit from even our lowest minimum charge.

Assume for the moment under the present system a flat rate of fifteen cents per 1,000 gallons and the result would be that a family using 30,000 gallons per year would pay \$4.50 per year and therefore pay practically no part of the fixed charges, whereas a large consumer using 100,000,000 gallons a year would pay \$15,000 per year, paying thereby an eighth of the fixed charges of the entire system. Summing the whole matter we arrive at the following method of fixing rates—Fix a minimum charge per consumer for fixed charges and then sell the water to each at practically a flat rate.

## WATER METERS

Of our six thousand odd services about one-third are metered. The law requires all new services and five per cent

of those unmetered Dec. 31, 1907 shall be metered each year. Some cities have done more than this and in every case their water consumption has been reduced to one-third or one-half that of our city.

Water is cheap but it costs a lot to store and distribute it. Over forty million dollars have been spent by the Metropolitan District for this purpose and if the present waste keeps up it will be necessary to spend large additional sums. Thirty gallons per day per capita is plenty for domestic purposes and we use and waste three times that amount. Last year the City of Melrose reduced it's per capita consumption to about one-half of ours and if this were done in Quincy by metering every service it would pay at least twenty-five per cent on the investment. On account of the high minimum rate meters have been set on the high fixture rates but these are not the places where the most leakage occurs as the plumbing is usually in good condition. This reduces the water income to the city in almost every case and does not reduce the per capita consumption to any extent. For these reasons and those given in the discussion of the water rates I firmly believe the whole city should be metered as soon as possible.

#### WATER CONSUMPTION IN METERED PLACES

Malden .....	46
Melrose .....	60
Brockton .....	34
Milton .....	44
Quincy .....	99

#### CONSTRUCTION

The extensions of mains have been made almost without exception to accommodate new takers and in each case there will be sufficient revenue to justify it. Forty extensions of various sizes have been made in various parts of the city. In a few instances there has been a direct advantage to the system in connecting up dead ends and reinforcing the supply. During the coming year there are a few mains which should

be laid to better the distributing system, on which there will be no increased revenue but most of the extensions now petitioned for will give additional revenue.

As there is no plan of a completed system for the City this matter is being looked into and a plan will be made so that when future extensions are made they may be a part of a finished system. As we have excellent pressure and plenty of water good fire protection may be obtained in all parts of the city by a proper distribution of the right sized pipes and as the city grows these pipes will not have to be taken up and larger ones substituted. From the number of petitions on hand the first of the year I expected to have a balance left for the purchase of supplies but fully as many more petitions came in after the appropriation was made.

The appropriation should be made early in the year as better prices on materials can usually be made then and the work started early. As a rule nothing smaller than a six inch pipe is laid as smaller pipes will not give sufficient fire protection. Some additional hydrants should be set on existing mains.

During the year 312 new services were put in making the total number in use 6,403. The cost of putting in these services was \$8,718.06 of which \$4,491.74 was charged to the owners and \$4,226.32 charged to the City. 433 meters were set, making a total of 1,983 in use. 19 hydrants and 35 gates were set.

The total number of feet of street mains laid was 17,806 feet, 1,072 feet of 2 inch was taken up, making the total length of street mains 561,161 feet.

The following tables will show miles of pipe, number of hydrants and gates, also the location of pipe, hydrants and gates put in during the year.

List of stock can be found on file in my office.

Respectfully submitted,

RANDOLPH BAINBRIDGE,

Commissioner of Public Work,

# Report of the Building Inspector

---

Quiney, Jan. 1st, 1909.

To His Honor, Mayor of City of Quiney:

In compliance with the provisions of the City Charter I herewith submit the second report of the building department.

## NEW BUILDINGS

There has been an increase in the value of building operations during the past year over that of the previous year of about forty per cent., a large percentage of the same being in the fifth and sixth wards of the city.

Building operations have also been very active at Houghs Neck there having been a number of permanent dwellings built there together with a large number of summer cottages. In regard to the construction of the buildings I would recommend that the ordinance be amended relative to the prevention of the spreading of fire in this district.

Following is a list of permits issued during the year:—

## DWELLINGS

REPORT OF THE SUPERVISOR OF GRAMMAR GRADES

---

MR. JAMES N. MUIR, *Superintendent of Schools, Quincy, Mass.*

My dear Mr. Muir:

It gives me pleasure to submit the following report:

Since the "process of education is made up of units of learning"—each of which must be mastered—the general trends are towards such types of instruction. Traditional schools ignore the mastery of true units of learning and focus their attention upon the performance of assigned tasks. It has been well said, "The practice of keeping the mind fixed upon lesson performance instead of upon clearly defined units of learning leads logically and unalterably to the theory of appraisal and control of pupils' progress, the antithesis of mastery."

Keeping our place in the van of progressive education, the principles underlying instruction by units of work have been presented to the teachers and types of such work placed in their hands. They have been asked to fix as the goal of their year's work, such types of instruction. These are to be submitted to a central committee for constructive suggestions. The ultimate plan is to take such outstanding pieces of work—the past of our schools has had splendid examples of creative teaching—and "pool" them for the benefit of the city. We anticipate, by use of the work done in our midst, broadening ideas for the experienced teachers and real help for the teachers new in the profession.

I wish to thank the girls and boys of the Massachusetts Fields and Montclair Schools for their excellent contributions to the Bridgewater Exhibit. The one, an individual project, wherein "the stage was set," portraying accurately the scene of "The Signing of the Oath of Allegiance"; the other, a set of slides in colors depicting the salient episodes connected with the solution of the problem, "How the English Colonies Came to Separate Themselves from the Mother Country."

In closing, may I again avail myself of the opportunity of expressing to you my sincere appreciation of your confident support, and also of thanking my co-workers—the principals and teachers—for the encouragement afforded by their spirit of gracious loyalty and untiring cooperation.

Respectfully submitted,

HELEN MAUDE DELLICKER,  
*Supervisor of Grammar Grades.*

REPORT OF THE SUPERVISOR OF DRAWING

---

MR. JAMES N. MUIR, *Superintendent of Schools, Quincy, Mass.*

My dear Mr. Muir:

I herewith submit my annual report of the drawing department of the public schools of Quincy for the year 1932.

Several extra pieces of work were completed this year in addition to the routine work of the department. The first of these was an exhibit held in Kingson Hall, in February, for the Quincy Art League, showing the progress of the drawing work from Grade I through the Senior High School in the subjects of Design and Representation. The exhibit contained ninety-six mounts of drawings which well filled the hall. The work exhibited was chosen from the regular school work, and every school in the city was represented. Twenty of these mounts of drawings were later loaned to the Wollaston Woman's Club for exhibition purposes.

Later in the spring a request was received from the Chamber of Commerce for a design for a banner for "Quincy Day." This was made a contest in the four Junior High Schools of the city. The judges announced Barbara Drury of the Central Junior High as the winner of the first prize, Forrest Kimball of Central Junior High winner of the second prize, and Helen Ferris also of Central Junior High winner of the third prize. Six special honorable mentions were given and many honorable mentions, all divided among the four schools.

Posters were made again this year for the Norfolk County Health Association, the contest being carried on in the Junior High Schools of the city. The Quincy judges met on May 20th, and selected the five best posters from the seventh, eighth, and ninth grades. These posters selected by the judges were sent to the annual meeting of the association at Braintree to be exhibited and judged with posters from other cities and towns of Norfolk County. Geraldine Avery of the Quincy Point Junior High received second prize in grade seven and Marilyn Walsh of Central Junior High received honorable mention in grade eight.

In the fall of this year, several changes occurred in the teaching staff of this department. Miss Julia Rutledge of the Quincy Point Junior High had resigned to fill a position in Boston, and her place was filled by the appointment of Miss Helen Leighton of Arlington, who is an experienced Junior High School art teacher. With the addition of the eleventh grade at the North Quincy High School, and the prospect of the twelfth grade next year in that building, it became necessary to have two full time art teachers in that building. Miss Marjorie White of the Central Junior High was therefore transferred to this new position, and her former place was filled by the appointment of Miss Vera Stevens, who had satisfactorily filled a vacancy for us a few years ago.

A course in Art Appreciation has been started in the first six grades by means of slides from the department of Visual Education with the kind cooperation of Mr. Krasker.

I am glad to have this opportunity to thank you, Mr. Muir, for your unfailing help and interest in this department, and also to thank Miss Helen Ash for her faithful cooperation, and to thank

W. F. Messinger .....	Spring Street
E. L. Piper .....	Parkhurst Street
Joseph Lenine .....	Pawsey Farm
Mrs. Iola C. Rose .....	Parkhurst Street

# Report of the School Committee

---

To the Citizens of Quincy :

The rapid growth of Quincy is best shown by the overcrowded condition of her public schools, and the consequent demand for additional school buildings. While the city has done much to relieve the congestion in certain directions, it has, as a matter of fact, gained but little in the total seating capacity of its school buildings. The new Quincy School at Atlantic has twelve rooms, four more than the old building, yet the pupils that were formerly provided for in the annex have so filled the school that the old building will again be necessary to accommodate the pupils of this district. The Committee earnestly recommends that measures be taken to secure a building in the Montclair section of ward six. A school located in this precinct would not only relieve the Quincy School, but would also make it possible to transfer pupils from the Wollaston and Massachusetts Fields districts; thus giving ample school accommodations to the north end of the city for some years.

The opening of the year 1909 will see the children of the Coddington district in the new building. The Committee wishes at this time to congratulate the city, the architect and the builder upon this splendid structure, which so fittingly takes its place among the public buildings at the center of the city as the most complete and well constructed school building of our city. The new Coddington is largely the

product of Quincy industries. It has been the aim of the architect to incorporate in this building all the latest features of a modern school building, including a large assembly hall, properly directed light, ready exits and fire-proof stairways. The exterior is beautiful in its simplicity. Unfortunately, the yard space is so limited as to preclude a front view of the building from Coddington street. It is hoped that the city may eventually secure the Arnold property and thus give the children adequate yard accommodations. It has three more rooms than the old building. As it has been necessary this year to devote two rooms in the High School to pupils of the Coddington district, the new building will provide but one additional room, which means that only fifty new pupils can be accommodated in the new building. The capacity of the Washington School at Quincy Point is much over taxed and it will soon be necessary to make some provision for the pupils of this district. To relieve effectively and permanently the congestion in this part of the city your Committee requests that a building be erected in ward two, near the junction of Seammell, South and Sumner streets. A building in this locality would not only meet the local requirements, but would also relieve the Coddington, Washington and Adams Schools.

The School Committee, in its annual report for 1907, showed the need of a four-room building at Houghs Neck. This section of the city is rapidly becoming a place of permanent residence for many of our citizens. One hundred twenty-five pupils are transported daily from Houghs Neck and Germantown to the Coddington school, at an annual cost of about twelve hundred dollars. Considered, solely from an economic standpoint, a building such as is recommended could be maintained, including interest on the investment, at a less sum than is paid for transportation alone, and the present inconvenience to parents, children and the city would be avoided.

The matter of the addition to the Lincoln School has been in abeyance for some months. On June 3, 1908, the

School Committee received the plans of the several architects and, on June 12, the plans submitted by Mr. Charles A. Brigham were approved and accepted by the School Board. This completed its part of the work. Since that time the matter has been before various committees of the City Council and was finally disposed of when, on December 24, an appropriation of \$12,000. was approved by His Honor, the Mayor. It is reasonable to suppose that work on the Lincoln addition will be actively begun with the advent of the new year.

It is now an acknowledged fact among educators and medical men of the country, that the intellectual and moral development of the child is largely dependent upon his physical condition. Under the supervision of Mr. Ernst Hermann the public school course in physical training is one of progressive physical development from the lower grades through the High School, adapted to the age and physical need of each pupil. The supervisor is ably assisted in this work by the regular medical inspectors, who, fully appreciating the importance of such a course, have volunteered their services and are giving their time and skill to promote the public health. The adoption of the one session in our first and second grades has met with general approval, and will aid materially along these lines, as it gives young children more time for out-door play and bodily development. The citizens also have recently voted to provide public playgrounds as required by Chapter 513 of the Acts of 1908. With such co-operation from both city and state the children of Quincy have indeed every opportunity of becoming strong men and women, physically, mentally and morally.

The introduction of the savings bank system in the schools has met with success even beyond the most sanguine expectations. About 57 per cent. of the pupils are now taking advantage of this latest innovation and have deposited to their credit in the Quincy Savings Bank over four thousand dollars. A word of thanks is due to the Civic Betterment Committee of the Quincy Women's Club through whose

good offices the system was installed without expense to the city.

---

The above report presented by a special Committee, consisting of Mr. Charles H. Owens, Mr. Arthur W. Newcomb and Mr. John A. Duggan, was adopted as the annual report of the School Committee Tuesday evening, December 29, 1908.

FRANK E. PARLIN,  
Secretary.

# Report of the Superintendent

---

To the School Committee of Quincy:

Herewith I submit my ninth annual report which is the thirty-fourth in the series of annual reports by the superintendent of public schools and the fifty-ninth of the printed reports of the School Board of Quincy.

## Physicial Education

The aim of all education should be life, power and efficiency—life, broad, deep, full and rich; power of body and of mind; efficiency in thought and in action—these to the capacity of the individual. Thoughtful persons who have carefully considered the matter seem thoroughly convinced that the right development and education of human beings cannot be secured from books and by schoolroom methods alone, that man is more than intellect and that the fundamental laws of growth and education require some quite different agencies from those in general use. At all periods of school life, physical education—the appropriate, systematic training of all pupils, girls as well as boys—has been unknown in the public schools of this country. Many competent judges are convinced that gymnastics, as usually practiced, are a positive injury to many pupils and of little benefit to the rest. They lack nearly all the elements of good physical

exercise. They certainly are not generally enjoyed by the children and frequently are as severe a tax upon the brain as the studies from which they are supposed to furnish relief. The very close relation of mind and body is only beginning to be appreciated by educators. They are now learning that without physical activity mental development is impossible, that the first and best tutor of the mind is the body. Brain and muscle instead of being mutually antagonistic are mutually complementary and form an indispensable union in the complete development and education of man. When men were taught to neglect and despise their bodies, not only physical but mental degeneracy began and the dark ages naturally followed. In the development of the race and of the individual, mind and body have always served and taught each other, and the work of one has been equally as necessary and important as that of the other. Without the mind, the body is useless; without the body, the mind is helpless in human affairs, at least. It is only when both receive appropriate care and training that man appears at his best, as the crowning glory of creation. Poets and artists have not been wont to clothe their gods and heroes in physical weakness and ugliness but in strength and beauty, and the modern psychologist knows there is in this more than a poet's fancy.

In this country, physical education has never been taken very seriously. Until recently, we have been satisfied with the name without the substance thereof. Fortunately for the rising generation and for the nation, our eyes are opening not only to its vital but to its intellectual, moral and social importance. If there are to be strong and completely developed men and women, there must first be well developed children. As Jacob Riis said recently, "You can never make more than half a man out of half a boy." He might have added that a boy without physical education is never more than half a boy. The salvation of the boy has been that he has usually insisted upon considerable physical exercise, even if secured in unwise and troublesome ways. In our anxiety to produce

learned little men and women we have forgotten the physical basis of intellectual and moral strength. It has been the custom, whenever education has yielded unsatisfactory results, to add new subjects to the curriculum, to send the children a little earlier to school or to require a little more home study. We seem never to have been impressed with the fact that the child's chief business is to grow and that, during the years before entering school, he acquires several times as much practical knowledge as he ever does during the same length of time at school, that few children leave school in as good physical condition as when they entered and that many teachers are nervous wrecks after a few years in the profession. Education need not and ought not to be such unhealthy business either for teachers or for the taught, and it will not be when the body is properly trained and the physical needs of all suitably recognized. It is a sad reflection upon civilization that it so often tolerates, if it does not demand, conditions which produce men physically inferior to their barbarous ancestors. It is neither wise nor necessary for the methods of education to conflict with the natural laws of development. All legitimate demands of modern life, of the highest civilization and of the greatest individual efficiency, may best be met by an education which conforms to the fundamental needs of the growing child.

The law requires that tuberculosis and its prevention shall be taught in all grades of the public schools of this state. It is a wise precaution, provided the teaching is made concrete and effective by appropriate physical training. Academic instruction alone will accomplish little. Upon the minds of children in the elementary schools, such instruction produces only vague and unmeaning impressions, until the precepts are enforced and vitalized through practice and the formation of hygienic habits, until an interest in their own physical development has been aroused and an ambition to possess a strong, active body has been awakened. Boys and girls, who have been thus taught and trained and inspired, are most loyal to instruction and to the laws of health. They

•

will do more to reform their parents and to improve the home conditions in regard to food, cleanliness and ventilation than all other agencies combined. But, if pure air and nourishing food are to yield the full measure of their benefits, children must develop large lungs, good digestion, strong circulation, steady nerves and sturdy muscles. To produce strong, active, disease-resisting bodies, regular physical exercise in the open air and sunlight, especially during the growing period, is absolutely indispensable. To complete the education of boys and girls and to give them the best possible preparation to meet the stress of life in every field, intellectual and moral, as well as physical, the playground and gymnasium are needed to supplement the school and books. At no period of life can so much be done to check "the great white plague" as during school days, but it will be through wise physical education rather than through classroom instruction. If the body is given an equal chance with the mind, it will fortify itself against disease and greatly increase happiness and usefulness. The youth who has learned to love health and strength, pure air and sunlight, is likely to respect the laws of life and to demand clean and wholesome surroundings. Man is a unity and he who would make most of him, as an industrial factor, as a social influence, as a citizen and as a man, must lay the foundation of his hope and effort where God and nature have laid it, in the body.

"Send the whole boy to school" has been a popular phrase in recent years, but, as the schools have been conducted, it has been impossible to send the whole boy to school, because no adequate provision has been made there for his physical needs. By fully recognizing the importance of physical education, by employing a thoroughly trained and experienced director, and by authorizing a more careful physical examination of the pupils, the School Committee has inaugurated one of the most needed and far-reaching reforms that have been made in the schools of this city for many years. The citizens by adopting the playground act have also greatly aided the movement and enlarged its possibili-

ties. With the co-operation of parents and medical inspectors the benefits to the children and the community will be incalculable. By removing physical defects and checking incipient disease, by securing a healthier growth and a better development, by awakening wholesome interests and by providing safe places for legitimate exercise, we render the instruction of the schools more effective, minor delinquencies less numerous, and the sum total of human happiness and usefulness much greater. It is in play alone that the whole child may be seen in action. The playground and the schoolhouse, being complementary factors in education, belong together. In Germany, the attendance at play is compulsory, the same as attendance at school, and the play time is as carefully planned and supervised as is the schoolroom work. The excellent scholarship and the exceptional physical development of the German youth prove the wisdom of the system. Well graded and properly directed play, games and athletic sports, supplemented by gymnastics, in the opinion of the most competent directors of physical education, constitute the best possible system for pupils of all ages. The out-of-door recesses, devoted to games in which both teachers and pupils join, have improved the work and spirit of the schools. All, returning to their duties refreshed and thoroughly awake, work much more effectively and enjoyably. The twenty-five minutes a day thus given to vigorous play in the open air, instead of diminishing, actually increases the efficiency of the school.

The tests of sight and hearing required by law have been made in all the schools with the following results: Number of pupils enrolled 6075, number found defective in eyesight 832, number found defective in hearing 164, and number of parents or guardians notified 569.

After it was decided to establish the Department of Physical Education, it required a long and careful search to find a man for director, whose views and training prepared him to do the kind of work desired, but such a man was found in Mr. Ernst Hermann who was unanimously elected. Mr.

Hermann has created unusual interest and enthusiasm in his work and has fully demonstrated his qualifications for the position. Your attention is invited to his report which follows:

To Mr. Frank E. Parlin, Superintendent of Schools:

On account of the recent establishment of the Department of Physical education and on account of the necessity of studying the school system, I feel that I shall better serve the purpose of my report, if I speak of the object of this department and incidentally relate what has been done towards inaugurating an efficient system of physical education in the public schools of this city.

A careful analysis of physical education shows that it embraces a rather wide and important field, permeating the whole educational curriculum. This is due to the fact that the school has largely taken the place of the home as the guardian of the health of the child and, by doing so, has accepted sociological duties. Since it takes children at a tender age and keeps them during the best hours of the day, at the time when it is their principal business to grow, it should see that they reach, first of all, a perfect physical manhood and womanhood.

Yet our modern school life rather tends to hinder perfect physical growth. This growth depends mainly upon all-round and diversified physical activities, upon much fresh air and sunshine, and upon absolute avoidance of mental and physical overwork. But since our school life practically stands for physical inaction, for sedentary occupations, for mental strain, for diminution of pure air and sunshine, for exposure to disease, nervous exhaustion, in short, for interference with all the natural functions of the body, it is evident that one of the main offices of this department must be to bring into the school life such measures as will not only prevent, as far as possible, any interference with perfect physical growth, but add that which will stimulate and enhance physical develop-

ment. Thus the first object must be to improve the health of the pupils.

To promote a better understanding I will briefly point out some of the main physical needs of a growing child and how school life interferes with these needs.

The muscular system is the principal agency through which the growth of heart and lungs, the intestines, the kidneys and all other organs essential to life, are stimulated and strengthened. The normal circulation of the blood and lymph, which carry the food to all parts of the body and remove certain waste products, depend upon all-round muscular activities. The interference with the elimination of waste products alone is a very harmful result of sedentary work. The lungs, best health insurance and our greatest danger, cannot get their full growth without plenty of exercise in pure air. If, therefore, the muscular system fails to secure sufficient exercise, all the organs must suffer and, if this neglect continues, one or more of the organs, if not the whole body, remains undeveloped. The nervous system and the brain, too, are absolutely dependent for their growth upon muscular activity. Thus, as Professor Tyler says, "The muscular system is at once the key to the development of the brain and the strategic center of the body."

From this it is evident that sedentary life and the lack of physical education is the greatest handicap to growth. And, since growth is not completed until the close of the adolescent period, physical education must go hand in hand with all other parts of education. Under physical education I include plays and games, gymnastics, athletics, dancing, all the fundamental manual occupations, real nature study, etc.

Up to about the eighth year physical education is the best means of promoting not only physical but mental and moral growth, and it should be directed principally towards the fundamental muscles. During the period from eight to twelve physical education should occupy the major part of the child's time. But, since at this time the child's brain has

practically reached its full dimensions, the training in the three R's may be undertaken, provided that the very great need of physical exercise is properly met. From twelve to fourteen, mental and physical education should still receive equal attention.

It is a mistake to believe that during the next cycle, the adolescent period, children may be safely subjected to severe mental training. This period usually falls into the first high school years. This is the period of most rapid growth of the vital organs, which annually grow several times as much as in previous years. It is also the period of the development of very important functions, also the storm and stress period of mind and soul. The immense growth of heart and lungs alone during this period demands that physical education retain an important place in the student's life. It is surely not a period for prolonged nervous and mental strain.

It might seem that thus far I had dealt only with the need of physical education as an hygienic factor. But, since brain and muscle cannot be divorced in the actions of healthy persons, it is clear that all these measures must affect the intellect also. The fundamental centers of the brain are the motor and sensory areas. Upon the development of these depends the growth of intellectual powers, which are later evolved functions of the brain. It is just as impossible to develop strong intellectual powers in a child who has only meager motor and sensory brain development as it is to add successfully a second story to a building having a foundation only strong enough to support one floor. Not only must we build up strong motor and sensory areas and allow the maturing of these areas, which are the very foundation of endurance and resistance, before we add to the superstructure but we must ever keep these powers in perfect repair. They require the closest attention throughout childhood and, if they are neglected, the whole brain structure will collapse sooner or later. Sometimes the neglect of this fundamental framework becomes apparent only in the succeeding generation.

Physical training is mental training. Motor education is the foundation of all other education, and without constant and varied muscular activities the brain cannot develop, and health and efficiency are impossible. By closely attending to the physical needs of the child, we not only promote its growth and efficiency but we increase many fold its capacity for future intellectual growth and moral development. In doing this we follow more closely the laws of nature, and the outcome will be a sturdier manhood and womanhood which will endure the strain of modern life, meet emergencies with a cool head and a ready hand, and will strengthen the social fabric with the tough fibers of a robust character.

The necessity for motor education and for giving more attention to the physical needs of the child are admitted by our leading educators and physicians. These needs have been met to some degree by many public school systems, both foreign and domestic. The private schools of our country, on account of their dependence upon patronage and because of the competition of rival schools, have rapidly accepted these teachings and have provided for the motor education and for an efficient hygienic routine. They have gymnasias, playgrounds, athletic fields and provisions for all-round manual occupations. The training of mind and of body go hand in hand.

Such equipments are of course necessary, if we are to meet the needs in a thorough manner. The public schools, although some of their superintendents have long recognized these needs, are handicapped by antiquated buildings, lack of competent instructors and adequate funds. This handicap, which must continue for some years has forced the physical education specialist to institute emergency work in the public schools, and has led, for instance, to school room gymnastics, which are only better than nothing. It should be clearly understood that this is only an emergency system, which the school authorities should try to remedy by providing the proper places for physical education. A gymnasium and playground should be provided with each school building

and, when new building lots are selected, they should be large enough to allow for these needs.

In the Quincy schools the existing conditions, as far as school-yards are concerned, are fairly favorable. In some instances, where the yards are rather small, we are favored with some open private land, which we have been permitted to use. If such lands could be permanently secured, and if they were put into proper condition and their equipment started, we could soon meet our most important needs. Some buildings have entirely insufficient yard space and no privileges of adjoining land.

The grass plots and flower beds should be done away with, and instead rows of shade trees should be planted. These should be so arranged that they furnish the largest possible amount of shade with the least sacrifice of space. Grading and proper surface covering are essential to good playgrounds. In some localities it would be well to surround the yards with fences.

A few of our buildings have halls which could be changed very easily into gymnasias. I would respectfully recommend that these halls be finished for the use as gymnasias, and that an appropriation be made for starting their equipment. These few gymnasias would soon prove their great educational and hygienic value, and I am convinced that our people would soon see the need of providing similar halls in other schools.

On account of the more favorable conditions as to yards, and because outdoor plays and games are our fundamental means for meeting the physical and motor needs of our children, a graded schedule of outdoor plays and games and sports was introduced into all the elementary grades in October. For this purpose an outdoor recess of fifteen minutes in the morning and of ten minutes in the afternoon was started. Each teacher was provided with a set of plays and games suitable for her grade, and a simple set of play implements were furnished. The games are minutely described and general instruction as to the physiological and

educational value of games was added. This first step has been successful. A review of our children after an outdoor recess with active games must at once impress an observer with the hygienic value of this work. A great many of our teachers have given evidence that it results in brighter mentality and better conduct in the class-room.

Plays and games have a definite educational value and, hygienically considered, are the best form of exercise for body, mind and soul. Fundamental social relations are established, such as devotion to a cause and loyalty to the community. Physical health, strength, endurance and skill are developed, habits of rational recreation are formed, judgment is developed and chivalrous virtues are fostered. The spirit of fair play is a mark of the highest morality. Whenever we insist upon fair play in all difficult situations, we are teaching loyalty for loyalty's sake, of which Professor Royse says: "In real life this form of virtue is at once the most valuable and the hardest."

For educational as well as hygienic reasons, and for the purpose of gaining time for outdoor work, a change was also made in the manner of entering and leaving the building by the children. They now enter and leave in a natural fashion, without forming lines and marching in lock-step. Although this change was somewhat revolutionary for present day school discipline, I am glad to report that the new way works splendidly in most schools. At the sound of the bell, without further instruction the children put their desks in order and leave the room and the building without crowding. Much time has been gained by this change, and the moral effect of such free action is very marked.

An exhaustive physical examination of all the children has just been completed. Special thanks are due the Medical Inspectors of our schools who have so generously given their valuable time. I have taken complete record of the physical development of the children and further individual records were gathered by the teachers. The medical ex-

perts examined heart and lungs, mouth, throat and nose. I shall prepare a statistical review of this examination, which will undoubtedly furnish most valuable records of the health and physical development of our school children. This will provide us not only with the necessary data as to the comparative relation of physical health to scholarship and deportment, but will also furnish for the future comparative records of the growth and development of the children while they are passing from grade to grade. It will also serve as a guide to the Physical Education Department in its future policy and will provide a great stimulus to the children in attending systematically to personal hygiene. In guarding the health of the children such an annual physical examination is of great importance. In detecting early signs of tuberculosis, spinal troubles, deformities, heart disorders, adenoids, malformation and decay of teeth, etc., these examinations will richly repay for the time and money they cost.

Without being able at this time to state percentages definitely, I am sure that there exists among the children a very great need of corrective gymnastics and some instruction in personal hygiene as to the importance of exercise, the care of the teeth, bathing and clothing.

Many of our pupils have what I would like to call school deformities. That is, they have exaggerated spinal curves, round shoulders, flat chests and flabby abdominal muscles. These deformities are the outcome of too much sedentary work and too little exercise of the fundamental muscles. They are also due to ill-fitting clothing which not only bends the frame but indirectly deadens the instinctive desire for exercise. Against this lack of general muscular exercise we have already made some provision. Yet plays and games alone can never correct these evils, therefore corrective and educational gymnastics are necessary. As my next step I shall introduce some simple gymnastic exercises which can be taught in the schoolroom by the regular teacher.

This is, however, a part of physical education which requires expert knowledge and great care. Much harm can be done by teaching these exercises in a wrong way. In order that this work may be done intelligently I have already organized a volunteer teachers' class which meets once every week. Although this was in part my reason for organizing this class, I hope that the teachers may be personally benefited by the work.

After the teachers have started these simple corrective gymnastics, I shall by personal supervision try to find such cases as may not improve by simple means and shall, if necessary, organize special classes in each school, which I trust I may find time to instruct myself.

This work of the teachers must for the present remain supplementary to all other physical education by plays and games. Yet, in order that the bad effects of our sedentary work may be somewhat offset and especially in order to meet the physical needs of exercise during school hours, I shall further provide such work as will stimulate heart, circulation and lungs and furnish all round muscular exercises in the school room.

Space does not permit me to give a detailed description of this contemplated work. It will be carefully graded and adapted to the physical, mental and moral capacities of the children in each grade. It will start with simple imitative actions in the first grade and gradually lead to complex exercises requiring knowledge, accuracy and precision, instant response and judgment, strength, skill and poise in the upper grades; passing from simple systematic work in the lower grades to complex rhythmic exercises and set drills in the upper grades. It will be recreative as well as educative.

In our High School these school-room gymnastics from five to seven minutes each hour would be of inestimable value. The pupils of this school should also have at least two periods weekly devoted to educational gymnastics, and plenty of opportunity for athletics of a moderate nature. 1

further recommend for this school at least two outdoor recesses daily and that the pupils be induced to indulge in all-round physical activities during these recesses. The building should be thoroughly aired during these intermissions by the opening of the windows, as the present system of ventilation is not sufficient. As a rule, pupils should not be permitted to stay indoors during recess.

The high school years are very important years in our education for future health and efficiency. The rapid growth of heart and lungs alone demand not only plenty of opportunity for all-round muscular activities but very careful guidance and judicious stimulation. To demand of these pupils prolonged mental and nervous efforts must result in strain upon mind and body, and interference with other very important growth. Severe mental efforts are good for both the boys and girls of high school age, but the periods of these efforts should still be of short duration. For general hygienic reasons, as well as for purely educational purposes, the high school period demands carefully adapted physical training. An important factor is the differentiation which must be made on account of the different problems involved with adolescent boys and girls. Without previous careful training in athletics and in the absence of general body-building work, great caution should govern athletics in the High School. Later on, when boys and girls will have gone through careful preliminary training in the grammar schools, this danger of lasting damage from too severe athletic contests will be minimized.

Athletics are, of course, of great value to young men, but in this work we have today great need of caution. Restrictions are necessary in the more violent and strenuous sports. Even if a boy goes through the high school and college athletics without lasting damage, he will find after a few years of practical life that his constitution is out of proportion to the average man. Training for efficiency means that we must fit a boy to take a place in the physical, mental

and moral life of today. There is great danger in too strenuous physical activities.

In closing permit me to express my sincere appreciation of your most valuable help and advice, and your great kindness towards me. I also would gratefully acknowledge the cordial reception which I have received from all the masters and the ready interest of all the teachers.

Respectfully submitted,

ERNST HERMANN.

### One Session for First and Second Classes

When the School Committee of Quincy authorized one session for the pupils of the first and second grades, it acted in harmony with the best educational thought of the day and in harmony with the best interests of the children. New England is the only part of this great country in which little children are sent to school at the age of five years or less. In the hustling west and even in the belated south, they are not admitted until they are six years of age. In this case, at least, we are not as wise in our practice as in our laws, because the legal age for entering school is seven, not five.

The introduction of the one session plan was made very easy for two reasons, first, because a very large majority of the parents favored it, and second, because in certain districts of the city the over-crowded condition made it necessary. Rarely does a misfortune work so much good. At the opening of the fall term the average number of children in the rooms of the first and second grades was over fifty, a condition which certainly should be forbidden by statute. To tolerate such a condition is not only to abuse pupils and teachers but to squander vital energy and sacrifice educational efficiency. No teacher can properly care for and instruct

fifty pupils of these grades or of any grade. Such a class must be divided into four sections, which means that the teacher is working with one-fourth of the class, while the other three-fourths are sitting in their seats busying themselves as best they can. That is, the children are under the teacher's immediate instruction about one-fourth of the time and are necessarily left to themselves the rest of the time. And what of value can the poor little things do? They must not play or make a noise for that would disturb those at work with the teacher. They can only sit as still as possible, or dawdle over so-called busy-work, until their turn with the teacher comes. It is little less than criminal to compel a five or six-year-old child to sit at a school desk four or five hours a day. It is very difficult for a healthy child of that age to sit still for any considerable length of time. He lives and grows through action but becomes fatigued and dull by sitting still. For him to become tired through normal activity is beneficial, because it promotes development, but for him to exhaust his energies trying to inhibit action retards growth. The child's position at the desk tends to compress his chest, diminish respiration and interfere with digestion. The blood pressure in the head and lungs is too great, while the heart and extremities of the body need the pressure caused by muscular activity. Any treatment of the child, which tends to check the growth of his heart and lungs or to impair his alimentary and circulatory systems, strikes at his health, happiness and usefulness. If there are to be steady nerves, a clear brain and active muscles, these must be supported by large lungs, good digestion and a strong circulation. Nature at this time is much more intent upon physical than upon intellectual development, much more concerned in making a good animal than in making a great scholar. And yet her method, although slower and less direct than ours, is far more successful in securing the ultimate ends of education. She enters her everlasting protest against drawing the blood from the extremities of the child's body and sending it to his head,

against confining his growing muscles for hours in an uncomfortable seat, against positions which tend to deform his pliant bones, against compressing his heart and lungs or disturbing his nutrition. If nature's protests were heeded, there would be less headache, anemia, dyspepsia, tuberculosis and morbidity during later life. The nerves, too, demand fresh air and sunshine. Upon no tissues of the body is the sunlight more beneficial in its effects than upon the brain and nerves. Nerve cells are very unstable structures.

Abundant sunlight makes them more stable, strong and steady; without it, they can have no healthy growth or function. The eyes of the child also suffer, because they are not ready for either fine work or short range. Their normal development requires the distances and changes incident to out-door life. The rapidly increasing defects of vision, which appear after the child enters school, are sufficient evidence that his eyes are not prepared to meet the demands usually made upon them. The evil consequences of defective eyesight are often far-reaching, sometimes seriously disturbing digestion, the nervous system and the general health. Not infrequently failure in school work and blemishes of temper and conduct, are due to imperfect vision or eye-strain.

These, briefly stated, are some of the reasons why children of the first and second grades, at least, should not be confined in the school room four or five hours a day. By the one session plan they are confined only half as long but receive just as much instruction as they did under the two-session plan. Each class is divided into two sections, one attending in the morning and the other in the afternoon. The advantages of this arrangement are, the teacher has only half as many pupils at any time, these pupils receive twice as much of her attention while in school, they are fresh, interested and attentive because the session does not fatigue them and they work under the teacher's constant guidance, and, best of all, they have regularly an unbroken half-day for free play out of doors. Although the children are in school only half-time, they do full work. In fact, they

actually do more and better work, because they work intelligently and to some purpose while there and because they work under much more favorable conditions: the air is better, there is less confusion and loss of time, the teacher has less to distract her attention and to dissipate her energies, she teaches more effectively and the pupils work more rapidly, mental impressions are more vivid and lasting, all enjoy school better and go home less fatigued. One needs only to observe the two plans in operation to be convinced that, for primary pupils, one session is better than two and that one session is quite as satisfactory in practice as in theory. Some fears were expressed at first that the afternoon children would play so hard during the forenoon that they would come to school tired and dull, even if they did not object to going at all, and that the afternoon work would be much inferior to the morning work, but nothing of the kind has happened. The afternoon pupils have had their play and do their work as readily and as successfully as do the morning pupils. In order, however, to be absolutely fair and to give equal opportunities to all, the two sections change places at the middle of the year, the morning section coming in the afternoon and the afternoon section coming in the morning.

When the schools are less crowded and only as many pupils are assigned to a teacher as she can properly care for and instruct, when it is no longer necessary to divide these lowest classes into two sections, then the teacher can have her pupils in the school in the morning and go with them to the playground or elsewhere in the afternoon, which will be much better than the present arrangement.

From what precedes it must not be inferred that I think that one session at school is best for children five and six years old, for I do not. I approve the plan only as the lesser of two evils. One session is better than two, but no time in the school room is best of all for children of these years.

## Manual and Industrial Training

It is not necessary at this time to discuss the reasons why manual and industrial training should be added to the system of public education, because that has been done in times past and because few thoughtful persons question either the need or the feasibility of introducing them.

Last year considerable space was given to the importance and general lack of motor education in the schools of this city, showing that such education includes physical, manual and industrial training. It is a great pleasure to be able to report that, during the last year, a most excellent system of physical education has been introduced into all of the schools and that manual training and cooking have been added to the High School courses. The city was exceptionally fortunate in the choice of instructors in these three lines of work, for a good beginning is exceedingly important in every undertaking. The interest of the pupils in these new subjects has been strong and constant, and the influence upon their work in other departments has been noticeably and only good. The practical benefits of these courses must be apparent to all who visit the classes and observe them at their work.

Thus far the manual training has necessarily been of an elementary character, because the boys, with few exceptions, were without experience in the use of tools or in shop work of any kind. The work is well adapted to their present needs but, at the end of another year, they should take up work of a different character. As soon as possible, the present form of manual training should be transferred to the grammar schools and some system of industrial training be devised for the High School. We are hardly in a condition to establish either a trade school or a school of mechanic arts, but it is possible to establish courses which shall have an important and direct bearing upon the future vocations of our boys. Much can be accomplished through our present or-

ganization by developing special industrial courses in the departments of science, mathematics and drawing; but these will not fully meet the needs. The motor element is lacking. There must be the practical side, the application of theory, the handling of tools and materials, real work.

There is a similar need in the case of our girls. We have an excellent course in cooking which includes something of household economy and home management. Courses in sewing, dressmaking, needle-work and millinery might well be added. Most of the current discussion upon industrial education deals with the needs of boys, but our girls are destined to be very important industrial factors. Most of them will have to earn a living in some sphere of manual activity, and it is necessary that they be so educated that they shall have skill of hand as well as of thought, that they may earn an honorable and competent livelihood. The domestic arts are likely to promote their welfare and happiness as much as the literary arts, and, through them, perhaps they will be able to add as much to the sum of human health, comfort and virtue as in any other way. Bookkeeping, stenography and typewriting are good, but not best for all. There must be a broader field of choice, a development of other talents and a preparation for other occupations.

This question of manual and industrial education deserves and demands our immediate and most careful attention.

### School Savings Bank

Through the very generous assistance and intelligent co-operation of the Civic Betterment Committee of the Quincy Women's Club a system of penny savings was inaugurated in the elementary schools of this city on Monday, October 5, 1908. Those who had the matter in charge carefully considered various systems and recommended the one approved by the School Committee, because it seemed to possess more desirable qualities than any other.

It is educational not only because it teaches and encourages the pupils to save but because it closely resembles banking methods, so far as depositing and withdrawing money are concerned. Each depositor fills out a slip, provided for the purpose, giving the date, the amount of his deposit and his name. This he hands to the teacher together with his money and school bank-book. The teacher compares the money with the deposit slip and, if they agree, she enters the amount upon the pupil's book and returns it to him. All money and deposit slips are given to the master of the school who sees that the appropriate ledger entries are made and that the money is deposited in the Quincy Savings Bank. Withdrawals are made in a similar way, except that they must be made through the master and at the personal request of the father, mother or guardian of the pupil. Pupils are urged to withdraw their money only in cases of necessity, sickness or removal from the city. Deposits of one cent or more are received every Monday. When a pupil has a deposit of five dollars or more, the master takes out in his name a bank-book at the Quincy Savings Bank and his deposit bears interest. The master also sees that all deposits of pupils having bank-books are properly transferred to their savings bank accounts before the beginning of each quarter. When a depositor graduates or leaves the city, he will be given his bank-book or the money due him.

The system seems to possess every possible protection for the pupils, as all collections are deposited each week in the Quincy Savings Bank, and, even if the pupil should lose his pass book, his money is safe. Neither he nor anyone else can withdraw it without the personal request of his father, mother or guardian.

The initial cost of introducing this system was less than fifty dollars which was met by the committee mentioned above. The running expenses are so very small that they can easily be met by one of several ways, if they are not considered a legitimate item for the School Department.

The following report covers the three months from October 5 to December 31, 1908.

SCHOOL	Number of Depositors.	Amount Deposited.	Average Deposit.	Number who previously had Savings Bank books.	Number of new Savings Bank accounts.	Number who have withdrawn money.	Amount withdrawn.	Balance on deposit.
Adams	251	\$326.30	\$1.30	68	10	6	\$8.55	\$317.75
Coddington	309	355.37	1.15	3	8	17	9.08	346.29

Totals	3,037	\$4,008.57	\$1.36	348	120	105	\$123.04	3,885.53

### James M. Nowland

Early in the year, after faithfully serving the community for nineteen years, James M. Nowland, Master of the Adams-Cranch district, resigned in order to devote his entire time to business interests.

Mr. Nowland came to Quincy in 1889, taking charge of the Adams School in September of that year. When the Cranch School was opened in January, 1901, he was made Master of it also. He continued at the head of these two schools up to the time of his resignation, February, 1908.

For nearly nineteen years Mr. Nowland worked with the children in this part of the city, quietly, conscientiously and effectively. He was never convinced that all education of value is to be obtained in the school room and from books alone. He was always an advocate of the physical side of education, insisting that children should not be sent to school as early as is the custom, that abundant provision should be made for exercise in the open air, and that manual training of some kind should be a regular part of school work in all grades.

To his teachers he was always kind and considerate, being appreciative of their virtues and not over critical of their faults. To the school officers he was frank but courteous, loyal without surrendering his own convictions or independence. As a citizen, he has always been manly, industrious and true to the best interests of the community. Mr. Nowland has the respect, confidence and good will not only of the hundreds who have been under his instruction but of those who have been associated with him, all of whom are glad he is to remain in Quincy and wish him abundant success in his new field of effort.

### The High School

The work and development of the High School are very satisfactory, never more so. The attendance has greatly improved, the interest and spirit of the pupils are remarkably

good, the corps of teachers is unusually efficient, and the standards of scholarship and deportment are high. The school certainly offers splendid opportunities to the boys and girls of this city and, if anyone fails to profit by these opportunities, it is his own fault and not that of the teachers.

There is one matter to which the attention of a very few parents should be called and that is the significance of graduation and the meaning of a diploma. On two or three occasions parents have made unreasonable demands upon the Head Master of the school, insisting that their children should graduate before completing a full course or doing the required amount of work. No pupil can be graduated simply because he has been a member of the school for four years. Some, on account of immaturity, ill health, unavoidable interruptions, or neglect of duty, require five or even more years to do the work, while others of unusual ability and application can do it in three. It is a question of work rather than of time. A pupil must have accomplished at least the minimum requirements for graduation. A diploma is never given as a favor, but always as a certificate of a pupil's attainments, a thing he has earned and which is his by right. A diploma which does not stand for merit, which is bought or obtained through favoritism or intimidation, is of no value whatever. Whoever gives or signs such a diploma knowing the facts, certifies to what is false; and whoever demands such a diploma is willing to deceive the public and to profit by misrepresentation. It then becomes the evidence of dishonor and disgrace. To go through the form of graduating can never transmute ignorance into knowledge nor add anything to one's scholarship. No diploma can ever change the mental or moral condition of the person who receives it. Graduation to be a credit must crown long continued and successful effort, and a diploma increases in value directly as the labor required to secure it. It should always represent work done, power developed, attainments reached. When these conditions have been complied with, the school authori-

ties are glad to give any pupil the honor of graduation and to deliver to him the diploma which he has earned and which is his by right, not by favor.

Your attention is called to the report of the Head Master which follows :

Mr. Frank E. Parlin, Superintendent of Schools :

Herewith I submit my report of the Quincy High School for the year ending December 23, 1908.

The year has been marked by the introduction of three much needed courses. These courses are Manual Training, Domestic Science, and Physical Training. Each is in charge of an efficient instructor. Classes in Manual Training and Domestic Science were formed last winter and, as a rule, the students have been most enthusiastic in the work. Many boys who had shown but little interest in academic study entered into this work with a most encouraging zeal. They are required to make their own drawings of models and, from those drawings, calculate the amount of material needed. Each student must complete a piece of work in satisfactory manner before finally leaving it for another. As soon as this is done, however, he may go on without waiting for his less diligent neighbor. In this way, each boy's advance is determined by himself rather than by any set class standard which holds him to a certain mould. There is abroad today an agitation for more industrial education. Such agitation is sure to result in much educational advance, especially for our secondary schools. That advance will show itself in a wise combination of the cultural with the so-called practical, a combination that places the practical on an equal footing with the cultural. Not until that equality is reached by a just expenditure for necessary equipment can these practical courses be fairly tested. Many boys are fitted by nature to become expert manual workmen.

The nation needs such as much as it needs professional and business men. The schools have been charged with edu-

cating away from the dignity of manual labor and the charge is, in a measure, deserved. They have left it out of their courses of study and, by ignoring it, have created a wrong impression in the young person's mind. If a city does not consider industrial courses worthy of an honored place in its school system, the students will grade their ideas accordingly. Fortunately educators are now becoming alive to not only the importance but the necessity of motor training. It is because of the splendidly varied manual training of his boyhood, that the farmbred lad has so often become a leader in the professional and business life of the city. High schools need industrial courses which shall furnish four years, or more, of carefully graded shop work, courses which shall place a boy an appropriate portion of his time at the bench, forge, or lathe. He may not learn a trade there but he will acquire a motor education which must prove of great value. He will learn to do by doing. The Domestic Science department should furnish the training peculiar to girls' needs. All girls, during their school days, should be offered instruction in the manifold practical things which go to make up scientific homemaking. The Quincy High School has made a long step forward in introducing the above mentioned branches, but the step should be followed by a conservative but steady enlargement of opportunity. It should be possible to do much more in a few years toward training the boys for industrial pursuits. Very little has been done as yet toward establishing regular classes in physical training. The instructor is working out a system for all the schools. This necessarily takes much time as well as thought and the grade schools have been given the greater attention.

With the opening of the present school year a change was made in the system of daily recitations. The object of this change was to secure shorter periods, with more frequent recitations. The program provides for a day of seven periods with daily recitations in the great majority of subjects. Such a program is not an ideal one but results thus far seem to justify the change. A day of seven periods, including

one given the entire school for study and consultation with teachers, would be a better arrangement. At present the instructors are teaching every period, which makes individual consultation an after school matter. Then, the instructors are weary from the five hours strain just ended while the pupils are tired and anxious to get home. An instructor can accomplish better results if he has at least one period a day for individual consultation.

Last spring, suggestive courses of study were printed as an aid in the wise selection of studies. A free elective system is good if pupils are wisely advised when making a choice of electives. Without such direction, the old arbitrary courses of study will accomplish more. The average pupil has a very small idea of what he ought to study, and, too often, is governed by a desire to follow the line of least resistance. As a result, his high school course becomes a patchwork of studies which possesses no constructive plans. The courses printed were arranged to furnish definite schemes of work along different lines of interest. Each member of the entering class this year chose one of these courses. If it seems wise after a reasonable trial to make a change, this may be done. To assist rather than insist is the aim.

An overwhelming majority of the first year class selected the Commercial course. The Commercial department furnishes a fine training to the pupil who will do his work well. It cannot make an efficient bookkeeper or an expert stenographer from a careless or incapable student. Completing the Commercial course with a high grade of work will mean ability to earn an immediate livelihood. The bookkeeping has been arranged so that a pupil may progress as rapidly as his inclination and ability allow. No one need set his pace to that of another unless he so prefers. An incentive is thus offered to individual ambition, which is encouraging to the willing student.

The class of 1908 graduated with one hundred and two members. Ten of them are now in college and six in the

normal school. Some members of 1907 returned for post-graduate work. Of these, five are in college and two in normal school.

The class of 1908 appropriated about one hundred dollars for pictures as their gift to the school. These pictures are in the Sub-Master's room and furnish a splendid memorial of the class.

In closing I wish to express my appreciation of the loyal assistance of the instructors, and thank you for your advice and support.

Very respectfully,

L. L. CLEVELAND.

### Evening Schools

The usual number of evening schools were maintained this year, opening on Monday, October 5, and, after forty-four sessions, closing on Tuesday evening, December 23, 1908.

The Adams School was in charge of Archer M. Nickerson, Principal, assisted by John F. Roache, Elizabeth Hiscock, Elizabeth A. Garrity, Josephine L. Kelley and Jennie F. Griffin. There were forty-four sessions, four more than last year. The total enrolment was 206, of whom 182 were men and 24 women; the average attendance was 57.8, or 28.05 per cent., and the average number of teachers was 5.13.

The Willard School was in charge of William R. Kramer, Principal, assisted by Isaac Goddard, Frances C. Sullivan, Lula E. Payson, Ellen G. Haley and Alice T. Clark. There were the same number of sessions as in the Adams; the total enrolment was 119, of whom 108 were men and 11 women; the average attendance was 33.8, or 28.4 per cent., and the average number of teachers was 4.

The enrolment in these schools was considerably less than that of last year and considerably less than it should have been, considering the number of illiterates employed in the various industries of the city. This was through no fault of the teachers but through the neglect of the employers to observe the law in regard to illiterate minors. If the evening schools are to fulfil their primary purpose, an inspector must be employed to see that the laws are enforced.

Again, the old complaint that many persons enter the evening schools through curiosity or some motive other than a serious intention to study, appears. After remaining one or two sessions and not finding it amusing, they cease to come. The entrance and presence of such persons occasions useless expense and trouble besides having a bad effect upon some who enter with good intentions. Both principals strongly recommend that a small registration fee be charged as a guarantee of good faith, the same to be returned at the close of the term to all who attend with reasonable regularity.

Judging from the attendance this year and from many requests received, it is desirable to maintain one school, at least, for those who wish to learn to read and write English, that is, to teach the elementary subjects, and another for those who wish to take up more advanced work, including the commercial subjects. This would provide for a considerable number who, having been compelled to leave school at the close of the grammar school course or early in the high school, find that further study would have a very important bearing upon their efficiency and advancement.

The Evening Drawing School was in charge of Laurence A. Sprague, who conducted the classes so satisfactorily during the last part of last season. The number of sessions was 44; the total enrolment was 58, divided into two classes, each attending two evenings a week; the average attendance per evening was 23.65; and the percentage of attendance was 82. The attendance and interest in this school seem to make it advisable to enlarge somewhat the scope of its work and to offer some special industrial courses. If such courses should

be introduced and meet the approval of the Commission on Industrial Education, the state would meet about forty per cent. of the expense. It is perfectly evident that the time has come for enlarging and improving the work of our evening schools, if they are to meet fully the purposes for which they exist.

Respectfully submitted,

FRANK E. PARLIN,  
Superintendent.

### Report of Truant Officer

To Mr. Frank E. Parlin, Superintendent of Schools:

I herewith submit my eleventh annual report as Truant Officer. With the rapid growth of our city and the changes of population, the duties of this office are constantly increasing. The past year has been a strenuous one and, in many cases, it has been only by the strict application of the law that children have been kept in school. The greatest difficulty arises from the desire of many parents to put their children at work. It is only fair to state that importunate demands for permission for the employment of children under lawful age come almost wholly from parents. The charitable agencies have in some cases urged that children under age be allowed to work, but after a full discussion, such agencies almost universally come to the conclusion that a better way for the relief of distress may be found than through child labor.

There has been a marked decrease in truancy during the past year. In every case of habitual truancy I have found the influence of street life, the cigarette and the pool room.

I desire to acknowledge the full co-operation and cordial assistance of the school authorities in my work.

The following table will show in detail my work during the year.

Respectfully submitted,

CHARLES H. JOHNSON,  
Truant Officer.

## TRUANT STATISTICS

1908	No. of absences reported.	No. of parents or guardians notified.	Truancies determined by investigation.	Truants returned to school on day of truancy.	Children returned to school from street.	Tardiness investigated.	No. of manufactories or stores visited.	No. of children found employed contrary to law.	No. placed on probation.

### Attendance and Per Capita Cost

Population of Quincy, estimated	31,000
School population, census	7,362
Number of different pupils	{ boys 3,191 } { girls 3,099 } 6,290
Average membership	5,769
Average daily attendance	5,364
Per cent. of daily attendance	92.9

Per capita cost, based on average membership.

a. For instruction	\$17.97	
b. For books, supplies and sundries	1.77	
c. For care of buildings	1.57	
d. For fuel	1.09	
e. For transportation	.23	
f. For rents	.06	
g. For supervision and administration	.62	
h. For repairs by Commissioner	.32	
i. For repairs by Committee	.03	
Total		\$23.66
Per capita cost, exclusive of repairs	\$23.31	
Average per capita cost in State	31.53	
Average per capita cost in Norfolk County	32.88	

### High School

The number of different pupils	{ boys 384 } { girls 415 }	799
Average membership		714
Average daily attendance		673
Per cent. of daily attendance		94.1
Per capita cost		\$40.05
Per capita cost, exclusive repairs		40.02
Per capita cost for instruction		30.95
Per capita cost for books, supplies, etc.		3.91

## RESIGNATIONS OF TEACHERS

The following named teachers resigned to accept positions as indicated.

## High School:

May,	Jane E. Avery,	Married
June,	Eleanor W. Guild,	Walpole
July,	William H. H. Peirce,	Melrose
August,	Elizabeth A. Souther,	Springfield
September,	W. Harold Claflin,	Redlands, Cal.

## Adams School:

February,	James M. Nowland,	Business
June,	Mildred B. Hopler,	Springfield

## Cranch School:

June,	Edith G. Coyle,	Married
-------	-----------------	---------

## John Hancock School:

May,	Annie R. Black,	Married
November,	Elizabeth Hiscock,	Boston

## Lincoln School:

June,	Florence M. Pratt,	Married
-------	--------------------	---------

## Quincy School:

June,	Anne H. Upton,	Newton
July,	Harriet A. Morrill,	Haverhill

## Washington School:

June,	Nina B. Gage,	Married
June,	Ethel Vogler,	Newton

## Willard School:

May,	Anna L. Woodward,	Married
------	-------------------	---------

## Supervisor of Drawing:

December,	Louise G. Bates,	Married
-----------	------------------	---------

**TEACHERS**

In service at the close of schools in December 1908.

## Class of 1908

Eleanor Teresa Acorn  
 Phyllis Arnold  
 Warren Sears Baker  
 Alfred James Barnard  
 \*Philip Simes Barnes  
 Stanley Spilsted Bates  
 Angelo Peter Bizzozero  
 Ralph Cedric Blake  
 Marion Frances Brown  
 Katherine Ann Callahan  
 Carl Oscar Carlson  
 Hilding Nathaniel Carlson  
 Alexander Wendell Clark  
 Leo Wiltham Cochrane  
 Cecilia Olive Costello  
 Francis Raymond Coyle  
 Carl Truscott Cranshaw  
 Jennie Cook Cumming  
 Vincent Ambrose Curley  
 David Edward Curtin  
 Helen Maria Damon  
 Warren Ellsworth Denton  
 Agnes Dolores Dolan  
 Annie Elizabeth Dorley  
 Edith Agnes Doyle  
 James Joseph Duggan  
 Eleanor Eliza Dunn  
 Louise Madelene Dunn  
 Elizabeth Frances Duran  
 Lucile Elwell  
 \*Marion Farwell  
 Nana Stillman Fisher  
 Mary Burr Flahive  
 Paul Raymond Fowler  
 George William Gavin  
 Catherine Holmes Gay  
 Mary Katherine Geary  
 \*Agnes Joanna Golden  
 Harold Martin Gore  
 John Endymion Gourlie  
 Lulu Jeannie Hadden  
 Kenneth Leslie Hewes  
 Gladys Helen Howe  
 Glover Elbridge Howe  
 Marion Louise Howe  
 Eliot Coolidge Johnson  
 Albert Monmouth Jones  
 Annie Zita Kane  
 Pearl Phyllis Keith  
 Ruth Kemp  
 Timothy Ambrose Keohane

Walter Hamer Lacey  
 Marie Grace Larkin  
 Watler Harold Leathers  
 James Henry Lewis, Jr.  
 Marcella Louise Little  
 Imogene Hopkins Livermore  
 Daniel MacQueen  
 Marguerite Brodrick McCarty  
 Hugh Joseph McDonald  
 Katherine McDonald  
 Christina Maud Moody  
 Beatrice Morrison  
 \*Blanche Morrison  
 Lucy Jane Moyle  
 William Joseph Nolan  
 Mary Agnes Nyhan  
 Emiline Benedicta O'Brien  
 Ruth Packard  
 \*Grace Cook Parker  
 Nettie Agnes Parlee  
 William Edward Pearce  
 Anna Augusta Peterson  
 Rosanna Beatrice Picard  
 Walter Erving Piper  
 Elizabeth Margaret Powers  
 \*Jessie Copeland Pratt  
 Mabel Thayer Pratt  
 Alma Beatrice Reed  
 Helen Constance Reilly  
 Everett Grant Rhodes  
 Edna Frances Rix  
 Harriet Elthina Ruggles  
 Richard Francis Ryan  
 Geraldine Scott  
 Stanley Carter Sherman  
 Roberta Webster Smith  
 Marie Jeanette Soule  
 John Alexander Souter  
 William Robert Staples  
 John Joseph Sullivan  
 Caro Ames Sumner  
 Mary Seviwright Summers  
 Alice Gertrude Thomas  
 Ellen Gertrude Travers  
 Harriet Waldron  
 \*Lawrence Brewster Walker  
 Blodwen Winifred Walters  
 William Augustine Weeden  
 Henry James Welch  
 Lawrence Samuel White  
 May Emily Young

\*Means a rank of Excellent for the course.

# The Grammar Schools

Friday Afternoon, June 19, 1908.

## Woodward Institute

---

*To the Mayor and City Council :*

GENTLEMEN :—The Directors of Woodward Institute herewith submit their report for the year 1908. During the year the Board has held regular meetings and has endeavored to discharge faithfully the duties devolving upon it. The meetings have been open to all entitled to attend them and all questions relating to the condition or needs of the school have been openly and frankly discussed. The Superintendent has met with the Board and presented a complete financial statement at each meeting. His report in detail follows this summary.

In harmony with a policy adopted eight years ago, the Directors confine themselves to legislative functions, delegating all supervisory and executive duties to the Superintendent under their direction and control. The growth and prosperity of the school under this policy has fully demonstrated its wisdom.

The school is in good condition and is doing excellent work. The membership is large and the attendance remarkably regular. There is perfect confidence and harmony between teachers, principal and superintendent. There is but a single purpose with all, that is, to carry out the wishes of the Founder in making it one of the best schools for girls in the state. The Directors do not claim perfection for the Institute (nothing is quite perfect in this world) but they believe all who visit the school will find it like a happy, industrious and well-ordered family, working intelligently for appropriate ends.

Respectfully submitted,

ELLERY C. BUTLER,

For the Board of Directors.

December 31, 1908.

## Report of Superintendent

---

*To the Board of Directors of Woodward Institute :*

GENTLEMEN :—The report herewith submitted is, in the series of annual reports of Woodward Institute, the fifteenth, and of the Superintendent the eighth.

By his will Dr. Woodward gave and bequeathed to the town of Quincy certain specified pieces of property for the purpose of establishing and maintaining “for the town of Quincy forever, a female institute, for the education of females between the ages of ten and twenty years, who are native born,” which institute he wished “to be as perfect and as well conducted as any other in the state.” Woodward Institute, therefore, belongs to the citizens of Quincy and is to all intents and purposes a public school. By the terms of the founder’s will certain citizens, by virtue of their office in the community, are directors of the school while others, by virtue of their office in the municipal government, are trustees of the fund, but both the school and the fund belong to the people. Each board has committed to its charge a sacred trust which it is bound to administer faithfully and intelligently for the public good. The Board of Directors has no more right to adopt in the management of the school unsound methods of education or of administration than have the Trustees of the fund to disregard safe principles of finance in the investment and handling of those funds. The obligations to carry out effectively the intent of the generous founder are as binding in one case as in the other, and the citizens would be as well justified in a protest against any abuse of trust or any selfish use of power in one case as in

the other. If the history of Woodward Institute proves anything, it proves that the school cannot be successfully run under the immediate direction of this Board. No important enterprise, certainly no school, can long continue to prosper and to maintain its highest efficiency under the direction of divided authority or under a fickle and indefinite policy. Many masters discourage and demoralize the workers and a constantly changing policy confuses and thwarts their efforts. There must be a single responsible executive who clearly sees the ends to be reached, understands the appropriate methods to be used, the agencies to be employed and the conditions under which the work is to be done. This does not mean that any particular person must occupy that position, but it does mean that there must be *one* person at the head who knows what needs to be done, how to do it and has the power to do it. There must be such a distribution of functions that there shall be no overlapping of duties and that each from janitor to principal shall know what is required of him and to whom he is responsible. There must be mutual respect and confidence so that time and energy may not be wasted and that all may work intelligently and harmoniously for the best interests of the students and the school.

As Woodward Institute was given to Quincy for the purpose of providing a first class secondary education for Quincy-born girls, it is incumbent upon those in charge of the school not only to offer such an education but to make it available to as large a number as possible. During the last eight years the institute has been closely associated with the other schools of the city and has served a definite purpose in the system of public education, being practically a girls high school with standards similar and in every respect equal to those of the Quincy High or any other first class secondary school. There has been a steady policy in its management and a definite plan in its development. All the facts prove that the school has prospered under this arrangement and that it has met the needs of the city and the wishes

of its founder more fully than ever before. The credit for these results belongs to those directors who established and have maintained a sane policy in the management and work of the school. During these eight years, they have confined themselves to purely legislative duties, handing over to their duly authorized agent all executive and supervisory functions and holding him responsible for the proper discharge of the same. This is the plan adopted not only in all the best public school systems of the country but in all successful business enterprises as well. The fundamentally important question for us at all times is how to make Woodward Institute of the greatest possible value to this community and, having answered it according to our best knowledge and belief, all are bound to act in harmony with that answer without reference to personal interests or ambition. It is doubtless true, as has been suggested, that the school would be as well conducted were it placed in charge of the School Committee but, since it cannot be so placed without endangering the fund and without court proceedings, the proposition seems inadmissible at present.

At the close of the spring term, Miss Helen H. Clafin who had been in charge of the department of modern languages since September, 1903, retired from the teaching force of the school. During the five years Miss Clafin was with us, she worked cheerfully and faithfully for the improvement of her department and left it in much better condition than she found it. Miss Addie E. Towne, a graduate of Wellesley and a teacher of very successful experience, was selected to fill the vacancy. Her work thus far fully justifies her excellent reputation.

Formerly, the study of music was required of all pupils during their entire course. Under the present course of study, it is a required subject during the first two years only. At the beginning of the third year when the pupils take up the study of harmony, it is elective. The change seems to have been a wise one as it released pupils of little or no

musical ability from a long continued study of a subject of which they have small appreciation and from which they receive no adequate benefits. Those who elect music during the last two years like it and are doing better work in it than previous classes. The entering class is also doing unusually good work in music. The results secured in this department, which have always been of very high order, continue to improve and are entirely satisfactory. It is hoped that time and appropriate means for the study of the "Appreciation of Music" may soon be available. There should be lectures upon the leading composers and a pianola to reproduce some of their best work.

The Department of Physical Training suffers from lack of locker room. There are only seventy-eight lockers for one hundred sixty girls. The lockers are not of a satisfactory type and the room is small and very poorly ventilated. Additional room can be secured by changing the partitions so as to enclose part of the adjoining corridor and, by rearrangement of lockers, space can be provided for a considerable increase in number. If the windows of the gymnasium and of the chemical laboratory were properly protected, the little green south of the building would provide an ideal place for many out-of-door games. The best directors of physical training are introducing a large number of games into their work, believing they provide the best kind of exercise and maintain a much greater interest. Besides the physical training, the instruction in hygiene and "first aid to the injured" are the most important work of this department.

Last year the commercial course was extended and improved. The work in this department was never better but more room is needed in order to make the conditions satisfactory. By allowing the Business and Art departments to exchange rooms both would be better accommodated. The Art department would thus secure the desired northern light and the Business department the needed room. Moreover, the typewriters which are in the upper corridor, where

they seriously interfere with other classes, could be placed out of hearing of those classes and under the constant observation of the teacher. These changes can be made at little trouble and expense and should be made before the opening of the new term.

Without specific mention it is sufficient to say that all the teachers are working faithfully, harmoniously and efficiently. The teaching corps was never stronger nor the school in a more satisfactory condition. It has not reached perfection at any point nor does it expect to in the immediate future, for improvement always shows where further improvement is possible. The development of the school is normal, its influence is wholesome, its aims are right and its prospects are promising.

The attendance for the year was 95.4 per cent., which is 3.3 per cent. higher than last year and the highest in the history of the school. There was also a decrease of over 43 per cent. in the number of tardinesses.

The following table shows the class and total enrollment of pupils each year since the school was opened, also the number of regular and special teachers employed.

	SEVENTH CLASS	SIXTH CLASS	FIFTH CLASS	FOURTH CLASS	THIRD CLASS	JUNIOR CLASS	SENIOR CLASS	POST GRADUATES	TOTAL	TEACHERS		
										REGULAR	SPECIAL	TOTAL
Spring of 1894.....	28	15	17	13	7				80	7		7
1894-1895.....		41	44	18	17	5			125	8	1	9

1896-1897.....			29	28	32	5	8	5	107	8	3	11
1897-1898.....			13	22	23	28	5	3	94	8	3	11
1898-1899.....			14	13	17	21	27		92	8	3	11
1899-1900.....			20	14	13	14	21	3	85	8	3	11
1900-1901.....		3	28	18	11	14	14		88	8	3	11
1901-1902.....		13	40	28	15	9	14	2	121	7	3	10
1902-1903.....		11	55	35	27	16	9	2	155	8	2	10
1903-1904.....			43	46	30	25	15	5	164	8	2	10
1904-1905.....				47	38	38	33	4	160	8	3	11
1905-1906.....				47	43	35	37	6	168	8	3	11
1906-1907.....				51	40	37	34	9	171	8	3	11
1907-1908.....				49	48	28	33	4	162	8	3	11
Fall of 1908.....				50	43	39	23	5	160	8	3	11

The class graduated last June numbered twenty-nine. Nine graduates entered college or other schools in September and five returned for post-graduate work. The entering class numbered fifty, one more than the class of the preceding year.

It is always gratifying to receive evidences of the appreciation and good will of graduates of the school. Reproductions of slabs forty and forty-one of the Southern Frieze of the Parthenon were presented by Miss Irene Cecilia Dasha, a member of the Class of 1908; and a bust of Beethoven, presented by Miss Mabel Elizabeth Lovejoy of the Class of 1907.

More than the usual sum was expended this year on improvements and repairs. One large and unexpected bill of expense was due to the collapse of the main fresh-air duct, a large brick structure leading from the outside of the building to the fresh-air chamber in the fan room. New grates were provided for one of the boilers and various minor repairs were made upon the building. Extensive and much needed improvements were made upon the grounds, the lawn directly north and west of the building being entirely regraded. This required considerable additional loam, several cords of dressing the relaying and resurfacing of the driveway, and two new dry wells to receive the water from the conductors on two sides of the building. Over fifty yards of granolithic walks were also laid. The remainder of the lawn bordering on Hancock street should be regraded and fertilized in the near future.

Respectfully submitted,

FRANK E. PARLIN,

Superintendent.

December 31, 1908.

## EXPLANATIONS

*Required* work includes subjects which all pupils are expected to take, unless excused by the Principal.

With the consent of the Principal, a pupil may select from the *electives* as many subjects as her health and ability will warrant. Ordinarily she is expected to elect not less than twelve (12) nor more than fourteen (14) periods per week. The approval of parents should accompany any request to take a greater or less amount of work.

In the column marked "periods" is indicated the number of exercises per week.

In the column marked "credits" is indicated the number of points allowed for satisfactory work in each subject. A total of eighty (80) points, or credits, entitles a pupil to a diploma. One additional credit will be allowed each year for excellence in conduct and effort.

A pupil in any class may, with the approval of the Principal, elect from the preceding years' lists any subject which she has not satisfactorily completed.

## DEPARTMENT OF ENGLISH

## LITERATURE

The first two years of the course in literature are spent in reading carefully, but without attempting analysis and criticism, as much of the world's best literature as the time will allow. The books are selected because they are adapted to the minds of the readers and are worth reading. They include not only English classics but good translations from the literature of various nations and cover many subjects. There are three distinct aims in the course: (1) to teach the students to read intelligently and enjoyably; (2) to develop in them a taste for good literature; (3) to lay a broad foundation for the subsequent study and appreciation of the English classics selected for the third and fourth years. These are taken up in the order of narration, description, exposition, and argument. An outline history of English literature, supplemented by a study of English poets, completes the four years' course.

## COMPOSITION

Four compositions are required each week from the three upper classes. The work is correlated with the course in literature—narration, description, exposition and argument, each taken in turn. The course is designed to awaken the interest of the pupils in theme-writing and to enable them to express their thoughts clearly and logically.

The pupils are urged to write from their own experience, to write *often*, to eliminate by degrees all faulty expressions and to acquire the habit of using simple, correct, idiomatic English.

## DEPARTMENT OF PHYSICAL TRAINING

### Physical Training I.

Individual prescription work.

Class work. Military marching; free, ring and horizontal bar exercises.

Games.

### Physiology I.

Relation of health to posture, cleanliness and dress.

Study of the skeleton and of the muscular system.

Emergencies.

### Physical Training II.

Individual prescription work.

Class work. Marching, fancy steps; free, dumb-bell, club and wand exercises.

Games.

### Physiology II.

Anatomy, physiology, and hygiene of the respiratory and digestive systems.

Practical demonstrations and experiments.

Emergencies.

### Physical Training III.

Individual prescription work.

Class work. Marching; free, chest-weight, horizontal bar, ring and club exercises.

Fencing.

Games.

### Physiology III.

Anatomy, physiology and hygiene of the circulatory and nervous systems.

Study of the special senses.

### Physical Training IV.

Individual prescription work.

Class work. Marching, jig and fancy steps; free, bounding ball, dumb-bell, chest-weight, club, wand, and ring exercises.

Games.

### Physiology IV.

Physiology of the nervous system.

Papers on diet, exercise, sleep, bathing, and clothing.

Talks on first aid to the injured, together with practical demonstrations.

## DEPARTMENT OF MATHEMATICS

- I. Original work in inspectional geometry and elementary algebra.
- II. Elementary algebra completed.
- III. Plane geometry,—demonstrations and original work.
- IV. Solid geometry or advanced work in algebra.

## DEPARTMENT OF MUSIC

The aim of the department of music is to cultivate a taste for good music and to prepare the girls for intelligent and appreciative work in the further pursuit of the art in its various branches.

The vocal and choral study includes vocalization, solfeggio, sight reading, dynamics, breath control, intonation, enunciation, unison and part singing.

The elementary theoretical work (required) aims to give the pupil a thorough foundation in the elements of music and includes rhythm, meter intervals, the derivation and construction of our present day tonalities major, all minor forms and chromatic scale in all keys, triads, chords of the dominant and diminished sevenths and cadences, leading to the study of

Harmony—elective but strongly advised for all pupils in vocal or instrumental study.

Individual class work, one period weekly.

Vocal and choral work (entire school required) one period weekly.

## DEPARTMENT OF HISTORY.

- I. A preliminary consideration of the origin and races of mankind,—their primitive condition, migrations, and progress toward civilization.  
A brief study of the extinct civilization of the East. Greek history to the death of Alexander.
- II. Roman history from the founding of the city to the fall of the Empire.
- III. English history from the Roman invasion to the accession of Edward VII.
- IV. American history, special attention being given to the forces which have shaped the government of the United States and developed its present institutions.  
Civil government of the United States.

## DEPARTMENT OF SCIENCE

- I. Introduction to science,—training in careful observation and scientific methods as a preparation for subsequent work.  
The evolution of the solar system and the formation of the earth.  
The elementary facts of astronomy and geology.  
The examination of a few of the common minerals and rocks.  
The systematic observation and record of some common phenomena.  
Simple experiments to ascertain facts or to test given propositions.

The classification of facts under divisions of science.

II. Zoology, first half year.

The time is about evenly divided between laboratory and recitation work.

Elementary work in morphology, physiology and some ecology.

Botany, second half year.

There is considerable field work for the purpose of identifying plants, studying their habitat and procuring specimens for a small herbarium.

III. Chemistry or Physics.

A class in one subject only will be formed for those electing science in the third year.

IV. Physics or Chemistry.

The subject not taken in the third year is offered in the fourth.

## DEPARTMENT OF LATIN AND GREEK

### LATIN

I. Latin Lessons.

Translation of prose selections.

II. Caesar,—Commentaries on Galic War, books I-IV inclusive.

Sight reading.

Prose composition.

Grammar.

III. Cicero,—Orations against Catiline, The Manilian Law, and Archias.

Sight reading.

Prose composition.

IV. Virgil,—Æneid, books I-VI inclusive.

Sight reading.

Prosody.

## GREEK

- I. Greek Lessons.  
Translation of easy Greek narrative.
- II. Zenophon,—Anabasis, books I-IV inclusive.  
Sight reading.  
Prose composition.
- III. Homer,—Illiad books, I-III inclusive.  
Sight reading.  
Prose composition based upon Attic Greek.

## DEPARTMENT OF MODERN LANGUAGES

## FRENCH

- I. Pronunciation.  
Grammar: Declension.  
Conjugation of regular verbs and of  
a few irregular verbs.  
Simpler uses of tenses and moods.  
Syntax  
Memorizing: Vocabulary for oral and written work.  
Prose and poetry selections.  
Composition: Translation into French.  
Transposition.  
Reproduction.  
Dictation.  
Easy conversation.  
Reading of simple French.
- II. Grammar: Rapid review of grammar.  
Conjugation of irregular verbs.  
Uses of tenses and moods.  
Memorizing: Vocabulary enlarged.  
Idioms.  
Prose and poetry selections.  
Composition: Translation into French.  
Tranposition.  
Paraphrasing.

Dictation.

Easy conversation.

Reading: Contes de Fees, Merimee's Colomba.  
Sandeau's Le Gendre de M. Poirier.

III. Grammar: Review and continuation of difficult  
points.  
Syntax.

Memorizing.

Composition: Translation into French.  
Transposition.  
Paraphrasing.  
Abstracts.

Dictation.

Conversation.

Reading: Selections from Zola, Maupassant, Bal-  
zac, Hugo, Daudet, Loti.  
Corneille's Le Cid, Racine's Athalie,  
Moliere's L'Avare.

## GERMAN

### I. Pronunciation.

Grammar: Declension.  
Conjugation of weak verbs and of the  
more usual strong verbs.  
Simpler uses of tenses and moods.  
Prepositions.  
Syntax.

Memorizing: Vocabulary for oral and written work.  
Prose and poetry selections.

Composition: Translation into German.  
Transposition.  
Reproduction.

Dictation.

Easy conversation.

Reading and translation of Fairy Tales.

- II. Grammar: Conjugation of strong and irregular verbs and modal auxiliaries.  
Order of words.
- Translation: Schiller's *Der Neffe als Onkel*.  
Benedix' *Eigensinn*.  
Gerstacker's *Germelshausen*.  
Lyrics and Folksongs.  
Sight reading from easy texts.
- III. Prose Composition.  
Exercises in idiomatic German, including letter writing, short dialogues and descriptive themes.  
Conversation.  
Translation: Lessings' *Minna von Barnhelm*.  
Schiller's *Jungfrau von Orleans*.

## DEPARTMENT OF BUSINESS

- Commercial Arithmetic I. Subjects: Common and decimal fractions, common measures, interest, percentage, discount, insurance, taxes, duties, exchange, partnership. After a review of fundamental processes, pupils are drilled in business methods.
- Bookkeeping I. The principles of double and single entry bookkeeping are presented in a clear and practical manner. Neatness and accuracy are insisted upon.
- Bookkeeping II. The work of the previous year is continued giving, as far as possible in a school, business practice.
- Stenography I. The principles of stenography are taught and practice in reading and writing shorthand is begun.
- Stenography II. Regular and systematic practice in reading and writing shorthand is continued in order to secure accuracy and speed.

Typewriting I. After the use of the typewriter has been learned, practice is given in writing from shorthand notes and from dictation.

Typewriting II. The practice of the preceding year is continued and the pupils are taught to use at least one standard duplicator.

## DEPARTMENT OF ART

The study of art must necessarily be considered as a whole rather than the work of different classes; therefore, the course of drawing is arranged to meet the needs of the individual student and is varied to suit any requirements.

Pupils are not only fitted for continuing their studies in advanced schools but also to appreciate the best in art.

The general plan is as follows:

Free-hand drawing of objects in pencil, and pen and ink, and principles of perspective.

Study of form, light and shade.

Study of design, applied decoration.

Study of color in water colors and in oil.

Modeling and casting.

Mechanical drawing.

## DEPARTMENT OF HOUSEHOLD SCIENCE AND ARTS

- I. A simple outline of the location, surroundings, and proper conditions of a home. Special attention is given to the dining room and kitchen, together with the care and use of their furnishings.
- II. Study of air, fire, water and some of the most important elements in relation to life, heat and cooking.

- III. Study of food, its functions; growth, waste and repair of the human body.
- IV. Food principles; carbohydrates, fats and oils. Under these subjects, foods are prepared and cooked by the pupils. The composition, food value, growth, market value and best method of serving are discussed.
- V. Visits to the markets to see the cutting up of beef, lamb and veal, that the pupils may be able to buy economically and understandingly the different cuts of meat.

The second year course will be a continuation and enlargement of the first year year course, with lessons on invalid cooking and serving, table service and table etiquette, the preparation of inexpensive but nourishing meals and the serving of the same, instruction in drawing plans of a kitchen and dining room, and in furnishing them conveniently, economically and tastefully.

## Founder's Day

Thursday Evening, March 12, 1908

**Program of Music by past and present pupils of the  
School, under the direction of Mr. John D. Buckingham**

1. Bohemian Dance . . . . . *Sochting*  
 MISS EMMA E. WALKER, 1st Violin  
 MISS RUTH A. KEATING, 2nd Violin  
 MISS GERTRUDE M. BROWN, 2nd Violin  
 MISS MARION L. MOORHOUSE, Violoncello  
 MISS NELLIE M. DRUMMOND, Pianoforte
  
2. Songs :  
 a. A Sweeter Story Still . . . . . *Hope*  
 b. The Lass with the Delicate Air . . . . . *Arne*  
 MISS TERESA KEATING
  
3. Chorus :  
 a. Just for Today }  
 b. Like a Cradle Rocking } . . . . . *Paul Ambrose*  
 SCHOOL
  
4. Aria :—Tell Me My Heart . . . . . *Bishop*  
 MISS CELENA BELIVEAU
  
5. Pianoforte :—March from Suite of '91 . . . . . *Raff*  
 MISS ALICE L. CLAFLIN
  
6. Ave Maria . . . . . *Del Riego*  
 MISS KEATING  
 with Violin and 'Cello obligato
  
7. Chorus :—Serenade . . . . . *Matthews*  
 SCHOOL
  
8. Violoncello :  
 a. Andante from 2nd Concerto }  
 b. Capriccio . . . . . } . . . . . *Golterman*
  
9. Solo and Chorus :—The Little Bird . . . . . *Soderberg*  
 MISS BELIVEAU AND SCHOOL

## Graduation Exercises

Wednesday Evening, June 17, 1908

---

### Program

1. MUSIC BY THE SCHOOL

Under the direction of Mr. John D. Buckingham

Some Southern Melodies

2. ADDRESS

DR. JOHN M. TYLER

3. CONFERRING DIPLOMAS

REV. ELLERY C. BUTLER

4. CLASS ODE

## Class of 1908

Helen Mildred Fitzgerald	Edna May Hammack
Marion Estelle Johnson	Anastasia Irene Harkins
Bertha Shirley Badger	Viola Alden Hayden
Ruth Alden Bass	Lydia Gertrude Hennigar
Irene Marion Bradbury	Eva Antoinette F. Hobart
Margaret Patricia Brown	Annie Louise Laing
Mary Ellen Costa	Ellen Clara McClure
Frances Clair Daley	Agnes Howard Monahan
Irene Cecilia Dasha	Katherine Moran
Alice Dinegan	Annie Agnes Russell
Eunice Gertrude Doble	Julia Mary Sullivan
Alice Louise Galvin	Mary Josephine Talbot
Helen Elizabeth Goodhue	Marion Edna Thomas
Ida Rose Hamel	Edith Maria Wilbas

Abby King Wilde

## Class Ode

WRITTEN BY MISS MARIAN ESTELLE JOHNSON

We stand upon the crest of Youth  
 Beyond is Life.  
 We see not only Love and Truth  
 But Pain and Strife.  
 The clouds that hover near our view  
 To us are lined with silver hue.  
 The Onward path lies straight and true  
 'Neath Heaven's arch of bending blue,  
 And all is right, and all is right.  
 With glad, sad hearts we greet this day—  
 Hail and good-bye !  
 A golden day upon Life's way—  
 Hail and good-bye !  
 How kindly here the years have flown,  
 What happy hours our hearts have known,  
 What friendships here have found their own.  
 O sad, sweet day !—in minor tone—  
 Hail and good-bye ! Hail and good-bye !

## Calendar for 1909

---

Winter term: Monday, January 4—Friday, April 2.

Founder's Day: Friday, March 12.

Spring Term: Monday, April 12—Friday, June 18.

Graduation: Wednesday, June 16.

Fall Term: Tuesday, September 7—Wednesday, December 22.

New Year: Monday, January 3, 1910.

Holidays: February 22, April 19, May 30, June 17, and the remainder of the week from Wednesday noon next preceding Thanksgiving.
